Drop-in Warmers

DESCRIPTION

Drop-ins are designed with a self-insulating, energy efficient thermoset well for ease of installation in solid-surface, laminate, or metal countertops. Minimal heat transfer to the work surface allows the drop-ins to be installed without a thermal breaker strip.

All thermoset well drop-ins have a high-efficiency cast aluminum dome element positioned in the bottom of the well for direct energy transfer. Dome element requires that the unit must be used with water in the well. All units include a standard drain and drain valve.

PERFORMANCE CRITERIA

Drop-in warmers are designed to hold heated prepared foods at temperatures above the HACCP "danger zone" of 140° F (60° C). The performance standard is measured using the NSF mixture preheated to 165° F (73.9° C). The unit will hold the temperature of this product above 150° F (65.6° C). The temperature will be maintained best when the food product is held using pans with covers, the proper water level is maintained in the well, and the food product is stirred regularly.

Agency Listings

FEATURES

- Self-insulating thermoset well with exclusive direct-contact heating system provides the optimum design for energy-efficient operation and lower operating costs
- Thermoset fiber-reinforced, self-insulating resin wells provide maximum insulation
- Low water indicator light eliminates guesswork
- 6-ft. (183 cm) cord and plug
- Top mounting installation
- Standard drain for easy cleaning
- Recommend using full or fractional size pans up to 4" (10.2 cm) deep
- Meets NSF4 performance standards
- Thermostatic temperature control
- Cast aluminum non-stick dome element
