STEAM REQUIREMENTS FOR STEAM COIL STEAM GENERATOR

Requirements for Building Steam Input Pounds Per Hour	Compartments that Steam Output will Operate:	Steam Pressure Required Minimum/Maximum
80	2 convection compartments	35 / 50
95	2 pressure compartments	30 / 50
117	3 pressure compartments	40 / 50
156	4 pressure compartments	50 / 50

WATER QUALITY REQUIREMENT

The recommended minimum water quality standards whether untreated or pre-treated, based upon 10 hours of use per day, and a Daily Blowdown, are as follows:

TOTAL DISSOLVED SOLIDS	less than 60 parts per million
TOTAL ALKALINITY	less than 20 parts per million
SILICA	less than 13 parts per million
pH FACTOR	greater than 7.5
CHLORINE	less than 30 parts per million

Consult a local water treatment specialist for an on site water analysis for recommendations concerning steam generator feed water treatment (if required), in order to remove or reduce harmful concentrations of minerals. The use of highly mineralized water will mean that more frequent servicing of the steam generator will be necessary. The fact that a water supply is potable is not proof that it will be suitable for the generator.
