

SYR

SCOT YOUNG RESEARCH INC

Welcome to our New 2020/2021 Catalog

At SYR, we're on a mission to prove that cost, design, functionality and sustainability don't have to be mutually exclusive. We're all about making innovative things in an innovative way, so when you're being challenged to deliver more for less we can step in and step up to help.

We're in it for the long haul and hope you can join us on the journey.....

Kimberley Young

Global CEO

EXCELLENCE IN CLEANING SINCE 1954

Since the very beginning, our unique cleaning systems have been carefully designed and built to last, an ethos that is still very present in everything we manufacture today. Innovation and invention is very much at the heart of who we are, with our Research and Development team always busy creating new products to bring to the market. Our global growth has proceeded at such a rate since 1954 that today we have three manufacturing bases in Great Britain, USA and China.

WE MANUFACTURE

We are a long established manufacturer of quality cleaning products.

WE ARE

Dedicated to helping cleaning organisations since 1954 with our carefully designed unique cleaning systems.

WE INVENT

We are serious about product functionality, it forms the heart of SYR design philosophy.

WE FOCUS

We are passionate about cleaning innovation and training, wanting to share our industry knowledge and expertise.

WE CONSIDER

We are conscious of the environmental impact our business has, and take steps to re-use, reduce and recycle.

WE SUPPORT

Our unrivalled reputation for quality has established us as a trusted manufacturer of choice across industry sectors.

We will Create a Safe and Simplified World of Cleaning, Through the
Manufacture of Fit for Purpose, Innovative Products that Deliver
Unique and Effective Cleaning Solutions

Our Values

WE LEAD THE WAY

innovating and
inventing every day

WE ACT WITH INTEGRITY

creating a positive,
functioning work environment

WE ARE ONE TEAM

together we make
the difference

WE HAVE A PASSION FOR OUR WORK

putting people at the heart of
everything we do

WE COMMUNICATE FEARLESSLY

to build open and
honest relationships

WE DELIVER THE VERY BEST

holding ourselves
accountable in all we do

Scot Young Research's unrivalled reputation for quality has established us as a trusted manufacturer of choice across a range of industry sectors. We understand what makes each sector unique and, as a manufacturer, have the capability to design and produce bespoke products to perfectly match these requirements. Our expertise in cleaning helps teams meet their organisational goals, whilst our global logistical capabilities, combined with our strong customer focus, enable us to exceed service expectations.

Our team all share the same values and purpose, yet every one of us is unique and offer our own experiences and knowledge that others may not possess. We recognize that none of us is as smart as all of us and we value the contribution every individual makes to the success of our business. We communicate openly with each other, sharing our thoughts, opinions and ideas with members; as well as taking into consideration what others have to say. We are honest and straightforward, fostering friendship, loyalty and promoting a sense of fun into our working life.

SYR 6 Principles of Corporate Social Responsibility (CSR)

1 THE ENVIRONMENT

We take our environmental and social responsibility extremely seriously and we are committed to developing our business towards ecological, social and economic sustainability.

2 FAIR OPERATING

We will treat all current or potential employees, business partners and other stakeholders honestly and fairly and without prejudice.

3 COMMUNITY

We are committed to making a positive contribution to the communities in which we operate.

4 EMPLOYEE RELATIONS

Our staff are our most important asset. Within our staff is embedded our standards, our culture, our business ethos and our future.

5 STAKEHOLDERS

SYR strive to ensure that everyone with external trading and other relationships understand the standards of business engagement expected of them.

6 SUSTAINABLE DEVELOPMENT

We recognize the opportunity to develop the business sustainably which creates value for the benefit of our business and shareholders.

Corporate Social Responsibility SUSTAINABLE PRODUCTS

Icon Key

INTERCHANGE COMPATIBLE

Works as part of the SYR Interchange system.

WORKS WITH STRING MOPPING

Works with traditional string mopping.

WORKS WITH SOCKET MOPPING

Works with traditional socket mopping.

WORKS WITH FLAT MOPPING

Works with traditional flat mopping.

ECO-FRIENDLY

This icon ensures a product fits our sustainable standards.

WORKING WATER

The practical water capacity when using a sieve or wringer which allows for the water to drain away from the basket.

US QUARTS TOTAL CAPACITY

The volume of water that will fit in a bucket when filled to the brim. This value can give an idea of the overall size of the product.

CUSTOMIZABLE

Any product with this icon can be tailored to your brand with the option of printing your logo.

Safety Signs Keep People Safe

Risks should be controlled so that cleaners, and any other users of buildings, are kept safe and free from danger of injury.

SLIPS AND TRIPS

Slips and trips remain the single most common cause of major injury in UK workplaces. The process of cleaning can create slip and trip hazards, especially for those entering the area being cleaned, such as the cleaners. Examples include smooth floors left damp and slippery, trailing wires from a vacuum or buffing machine, which can present a trip hazard.

An effective cleaning regime requires a good management system to help you identify problem areas, decide what to do, act on decisions made and check that the steps have been effective. Good communication is also needed at all levels to ensure messages are effective and the right action is taken, e.g. between equipment and chemical suppliers to ensure suitability of a product for the type of contaminant and floor.

PREVENTION

Effective training and supervision is essential to ensure cleaning is undertaken to the correct standard. Cleaners need to be informed of their duties and why the cleaning needs to be undertaken in a particular way or at a particular time. Lack of understanding can lead to inappropriate short-cuts. Contamination is implicated in almost all slip accidents. Regular and effective cleaning to remove contamination helps to reduce accidents. People often slip on floors that have been left wet after cleaning. Stop pedestrian access to smooth wet floors by using barriers, locking doors, or cleaning in sections. Signs and cones only warn of a hazard, they do not prevent people from entering the area. If the spill is not visible, they are usually ignored.

NEW  

SAFEGUARD-R CAUTION SIGN

100% recycled durable moulded polypropylene safety warning sign. Printed using a unique in-mould print injection, which ensures high resolution images.

S0340000 - Safeguard-R caution sign

NON-TIP SAFETY SIGN

Durable polypropylene folding 'A' sign displaying 'Caution Wet Floor' in both English and Spanish.

| 993057ES - Eng/Sp

TALL CAUTION SIGN

Durable polypropylene caution sign displaying 'Caution Wet Floor' in both English and Spanish.

ROBUST DESIGN

WATER SAVING

TRANSFORM YOUR BUCKET

**CHANGE INTO A DOUBLE BUCKET
& KEEP THE CLEAN WATER CLEANER**

The use of a double bucket system promotes efficient cleaning and disinfection, as the majority of the dirt picked up by the mop ends up in the dirty/waste bucket, rather than in the cleaning solution.

NEW

DOUBLE BUCKET INSERT

Works with the MJ Combo, Wrangler and MJ Evolve to provide a separate dirty water compartment when mopping.

940926 - Insert

*fits easily into
the MJ combo,
MJ Evolve and
Wrangler combo*

REIMAGINED RECYCLED PLASTICS

We use our manufacturing expertise and state of the art production techniques to minimise product waste and maximise product life expectancy whilst creating a product that will support the environment through:

- › Reducing water consumption
- › Reducing plastic waste over its lifetime
- › Reducing chemical usage
- › Recycling materials destined for landfill
- › Reducing volume of waste being sent to landfill

MADE USING RECYCLED PLASTIC

FEATURES

- > Easy glide 3" rubber swivel casters
- > Ergonomic wringer
- > 14 US Quarts working water
- > Color-coded strong pick up and go handle to avoid cross contamination
- > Incredibly durable and tough
- > White clean and bold print
- > Made from recycled plastic wherever possible

NEW 14 QT CAPACITY

TC20-R
 Strong carry handle and sturdy legs with 3" casters & color coded wringer. Accepts String mops from 12 to 18 ounces. Made from a durable recycled plastic.

- S0332291 - Red
- S0332293 - Green
- S0332292 - Blue

- 950009 - Green
- 950010 - Yellow

60" KWIKI MOP HOLDER

Plastic String mop holder complete with aluminum handle.

- 940564 - Red
- 940565 - Blue

Color Coding In Cleaning

Reducing the Risk of Cross-Contamination

In the late 1990's the British Institute of Cleaning Science (BICSc) began to develop a universal color code which would be recommended for use in the UK cleaning industry. This process of color coding became so successful it is now adopted throughout the rest of the world.

Color coded cleaning is the process of designating colors to cleaning equipment in certain areas of a venue, reducing the spread of germs across areas and increasing hygiene throughout a business or home. The four main colors used to separate out areas - such as bars, public areas, kitchen & food preparation areas and restrooms - are red, blue, green and yellow.

**Red = Kitchen/
Back of House**

To help prevent grease from your kitchen being transferred into the lobby, which will increase slips and falls

**Green =
Outdoors**

To help prevent bacteria from your restaurant or building

**Blue = Lobby/
Front of House**

To help prevent bacteria from your restroom or kitchen entering your lobby

**Yellow =
Restroom**

To help prevent bacteria from entering your kitchen or lobby

Where is Color Coding Used and Who Uses It?

The color coordination of cleaning products can vary from business to business and the system you choose is entirely up to you. However, the above guide is the most broadly accepted system that most catering establishments adhere to. The color you assign to each area is your choice, so long as your staff members are trained on the system you choose.

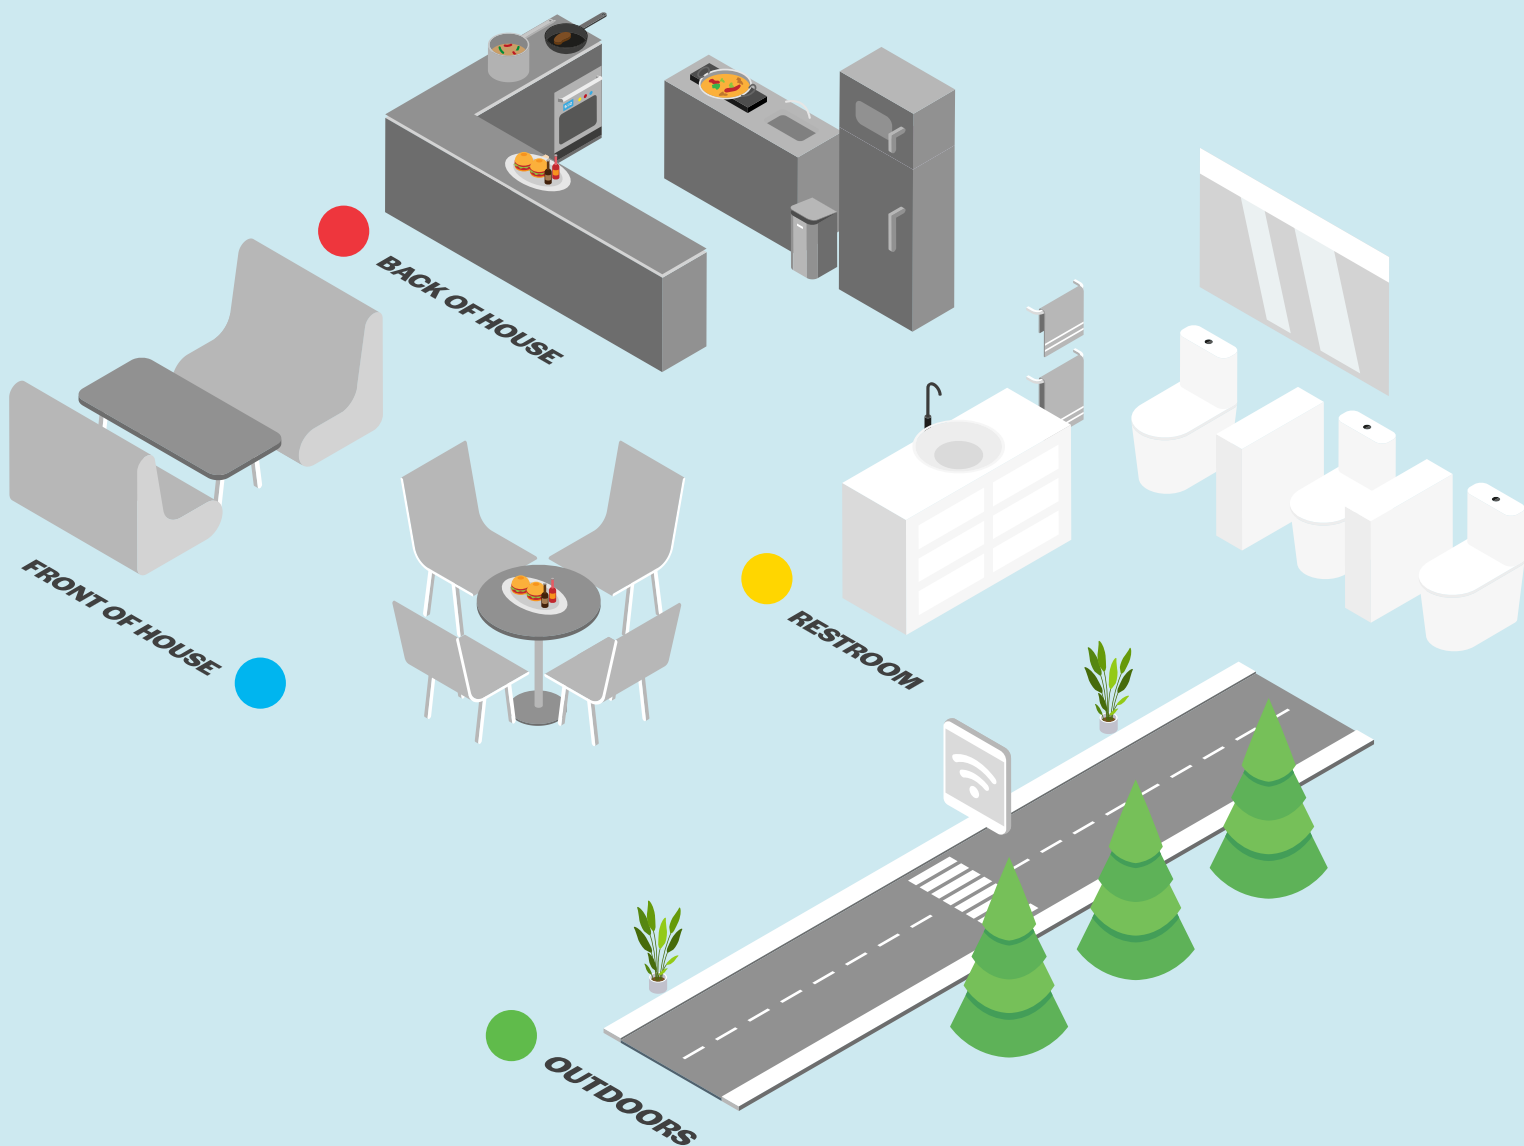

Choosing to employ a color system in your workplace can make cleaning easy, efficient and in turn increase general hygiene and cleanliness.

The Benefits of Color Coding

- Reduces potential risk of cross contamination
- Encourages proper product use
- Quick visual indicator for managers
- Removes language barriers
- Simplifies training a diverse workforce
- Easy to separate and organize tools
- Increases consumer confidence in cleanliness
- Reduces risk of spread of infections

Why is Color Coding so useful

Using a single mop to clean every floor in a restaurant, for example, can spread bacteria from the washrooms and toilets to kitchen and food preparation areas. This carries with it an inherent risk of cross contamination and consequently, illness. Applying a color coded system to segregate sensitive areas from one-another is the most efficient and effective way of reducing the risk of cross contamination.

Mopheads

- 993948 - Red
- 993950 - Green
- 993949 - Blue
- 993951 - Yellow

9 Reasons you Should be Flat Mopping

1 YOU COULD BE CLEANING TWICE AS FAST.

An independent study concluded flat mopping cleaned 4,878 square feet per hour, compared to just 2,564 square feet per hour with a 24oz. string mop head, nearly doubling efficiency. The MJ Evolve combines flat mopping with an ergonomic operating height. This combination of features provides dramatically faster cleaning with less strain, stress, and effort than conventional mopping.

2 COTTON STRING MOPS ARE FULL OF GERMS.

Microfiber flat mops are an effective way to clean for health and sanitation. Unlike cotton mops which naturally start to rot from first use, microfiber is synthetic and therefore does not deteriorate in the same way. The dense microfiber blend promotes deeper penetration for cleaner surfaces and when compared to a traditional mop head, microfiber mops can reduce bacteria by over 90 percent.

3 "CHEAPER" COTTON STRING MOPS ARE COSTING YOU MORE.

While microfiber mops can cost up to three times the price of traditional cotton mops, they last for significantly more washings (up to 500 in some cases) and maintain their effectiveness much longer. Microfiber durability and effectiveness maximizes the ROI within the first 150 washings.

4 OF ALL THE TASKS JANITORS PERFORM, MOPPING IS AMONG THE MOST DANGEROUS.

Mopping is the second-leading cause of cleaning-related injuries: These types of injuries result in significant financial loss to organizations in time, production efficiency, and worker's compensation. If floor cleaning is a key service in business operations, it's imperative to reduce or remove the possibility of repetitive motion injuries by choosing the appropriate, ergonomically designed tool for the task at hand.

5 CLEANERS HAVE A 10LB WEIGHT ATTACHED TO THE END OF THEIR MOP.

The most common sizes of wet string mops weigh between 16 and 24 ounces; these mops can triple in weight when wet. A 16-inch microfiber mop frame and handle with a damp mop pad attached weighs just over 2 pounds. This is especially concerning because a wet string mop can weigh up to three times its dry weight, making it extremely hard on the wrists, hips, and back.

6 RSIS LEAD TO AN AVERAGE OF 18 LOST WORK DAYS PER INJURY.

Most of a custodian's time is devoted to floor care, providing lots of opportunities to develop repetitive stress injuries (RSI) – the second leading cause of cleaning-related injuries. The term RSI encompasses injuries that affect bones, muscles, nerves, and tendons due to overuse. This can be incredibly costly for organizations, and dangerous for custodians. Reduced mop weight, combined with an ergonomic operating height, puts less strain on the worker's back and prevents fatigue over time.

7 FLOOR MOPPING TAKES UP 35–40% OF THE WORKING TIME IN MOST CLEANING JOBS.

Microfiber mops are versatile, easy to clean, and have longer life cycles than other mop materials in the marketplace. If the user is properly trained with the S-motion mopping technique, microfiber mops can quickly cover expansive areas with significantly less repetitious motion to the hips. Investing in quality flat mopping cleaning equipment reduces the amount of time required for floor mopping, which in turn can provide long term labor savings.

8 TRADITIONAL MOPS ARE ONLY GOOD FOR CLEANING THE FLOOR.

The SYR flat mop frame has a unique folding design, making it simple to clean your pad as you mop. Due to the design, in addition to cleaning hard floors you can also use the flat mop to clean stairs, back boards and some walls.

9 CHEMICALS RELEASED CAN CONTRIBUTE TO CHRONIC RESPIRATORY PROBLEMS.

The microfibers used in our mop pads, are made by fusing polyamide and polyester, then splitting them under high pressure. This process creates myriads of tiny filaments which can lift and absorb microscopically small soil particles (including bacteria), with little or no chemical requirement.

works with both MJ Evolve
& NU Combine 2

16" STEP ON FLAT MOP HOLDER

Unique folding break frame design. Easy to use at the push of a clip. Great for floors, stairs and backboards.

Are You In It for the Long Haul?

Delivering more for less is a constant pressure in the cleaning industry and as such cost-in-use, also known as the real cost, is beginning to play a vital role in supporting business success.

When considering material costs you should reflect on how much product is being consumed and the cost per unit. As an industry, we tend to opt for the lower priced product, which gives us an immediate cost saving. But if we adjust our strategy and look at cost, instead of price, how does this change our decision?

Some of our biggest savings can be made through reducing the time taken to complete a task. Identifying products that are fit for purpose and perform well, combined with new innovation and best practice, will allow the task to be completed in less time, therefore reducing labor cost.

Cost in use is the overall expenditure on products, storage, maintenance and labor – it is the sum of our total resource usage. It is a more realistic approach to understanding what our cleaning operations are currently costing and, more importantly, how to reduce costs without compromising quality of service.

THE BIG PICTURE

The actual cost of cleaning products and materials typically accounts for around 5% of the workplace cleaning budget, with labor being approximately 75%. So although the lower priced products will give an immediate, small reduction in cost, these products may generate the need for additional labor, will need to be replaced more frequently and may not always achieve the required standards.

Investing in better cleaning equipment will provide great savings in the long term. In the short term the cleaning products may be slightly costlier, however, innovative, durable, fit for purpose products can provide cost reductions far greater than the initial price saving.

When presented with budget challenges, rather than just trying to reduce costs via short-term price reductions, complete a detailed review of your operations including working practices, products and equipment so that overall efficiency improvements deliver the savings required, whilst maintaining, or even, improving operational performance standards.

MOPPING

Spray Flat Mopping

TRIPLE SPRAY JETS

REDUCES WATER USAGE

RAPID MOP

A light and mobile water fed pole which provides controllable moisture to give smear free dry floors. Ideal for daytime cleaning in lightly soiled areas. 57" long. Features a 16 us fl oz internal water reservoir.

993493 - Frame & handle

color coded rings included

MICROFIBER PAD

A general use cleaning pad for the Rapid Mop system. Launderable and highly absorbent.

993103 - Microfiber pad

pads have color coded tabs

RAPID PERFORMANCE PAD

A powerful cleaning pad for the Rapid Mop system, scrubber strips helps to break up stubborn dirt. Launderable.

926105 - Green

INTERCHANGE DECK BRUSH

A stiff bristled brush suited for scrubbing hard floors and surfaces.

991731 - Blue
991732 - Green

Cleaning Non Slip Flooring

Due to the nature of 'non slip' flooring, conventional mopping will not, on its own, effectively clean the floor. The mop simply deposits dirt into the micro troughs of the surface and edges, which not only leaves the floor looking dirty, but will eventually take away most of the effectiveness of a non slip flooring.

To effectively clean this type of flooring the use of some form of brushware to reach into the micro troughs is required. This can be achieved using what SYR describe as a heavy duty floor cleaning method - this requires the use of existing mops and buckets, but also a selection of brushes and a floor squeegee.

WE SUGGEST THE FOLLOWING PROCESS:

- 1 Section off an area to be cleaned and put out warning signs.
- 2 Use the mop and bucket (with cleaning agent), to wet area – at this time do not use the wringer as you will need to wet clean.
- 3 Use the Scrator brush (page 33) or Deck brush (dependant of size of area) to sweep over the wet area, and the grout brush if required in tiled areas or where there are 90° angles i.e. floor meeting wall.
- 4 Go over the area with the mop, to take up the excess water.
- 5 Use the Squeegee, at a comfortable arms length, pull the squeegee towards you, and tap to take off the excess water, slightly overlap for the second pass, and repeat until whole area is covered.
- 6 Bring all the water into one area, and then mop up the remaining residue.

Using this method will not only remove the majority of water off the floor, resulting in a dryer floor but will also remove more dirt residue, resulting in a clean safe floor with hardly any streak or scuff marks.

This method does take more time than a standard mopping process, therefore it is suggested that a section at a time is undertaken. If the process seems too long or complex to the cleaning operative, then the risk is that the task will not be completed effectively. A rota could split areas to ensure that all areas where this type of flooring is present would be cleaned using this heavy duty method a section at a time probably once a week i.e. a corridor, dining area or a classroom, whilst other methods i.e. standard mopping or use of the floor machine be used at all other times. If and where possible to reduce time, it is effective to use a two person team, this would involve person one doing procedures 2, 4 and 6, whilst person two would complete procedures 3 and 5.

There is no quick and easy fix for cleaning this type of flooring, but by using the methods as described, it would mean that a good clean and effective safety floor can be easily maintained, rather than be allowed to get into a poor condition that will take away the effectiveness of safety flooring in the first place.

Non Slip Flooring

DETAILED CLEANING

GROUT BRUSH

Angled tough polypropylene bristles for cleaning grout between tiles and floor edges. 9" wide.

- 930067 - Red
- 930069 - Green
- 930068 - Blue

Lightweight and extendable. Plastic moulded swivel hanging grip.

| 950327AA - 4'-8'

Risk

ASSESS & MANAGE

You need to think about what, in your business, might cause harm to people and decide whether you are doing enough to prevent that harm. This is known as a risk assessment. Once you have identified the risks, you need to decide how to control them and put the appropriate measures in place.

A risk assessment is an important step that will help you to protect your workers and your business, as well as complying with the law. It helps you to focus on the risks that really matter in your workplace - the ones with the potential to cause real harm. In many instances, straightforward measures can readily control risks, e.g. eliminating the need for ladders to clean high level areas. For most, that means simple, cheap and effective measures to ensure your most valuable asset - your workforce - is protected.

- 1 Identify the Hazards**
First you need to work out how people could be harmed
- 2 Who and How**
Decide who might be harmed and how
- 3 Evaluate**
Evaluate the risks and decide on precautions
- 4 Record and Implement**
Record and put into practice the results of your assessment

HARD TO REACH

High and Low Level

TACKY ROLLER

Enclosed lint roller on an extendable handle. Refill rolls available.

830100 - Roller

TACKY ROLLER REFILL

Lint roller refills to work with the Tacky Roller

KIT CONTAINS:

- 1 x Pipe cleaner
- 1 x Pipe cleaning sleeve
- 1 x Flexi duster & sleeve
- 1 X Studloc pole

**On average 1
MST head does
the same job as
30 rolls of paper***

Blue roll has a number of key properties that make it particularly useful across a multitude of working environments and tasks. Unfortunately it is single use, cannot be recycled and is over consumed and used inappropriately. It is very often combined with excess chemical dispensing, which not only leaves surfaces looking unclean and full of smears, but also increases cleaning costs.

So let us introduce you to another option.

SYR Multi Surface Cleaning Tool provides a more cost effective solution with superior cleaning results and can complete up to 80% of the tasks blue roll is commonly used for.

* Based on industry averages

Multi-Surface Cleaning

HARD TO REACH

THE MULTI-SURFACE TOOL

Can be used on internal windows, glass and a multitude of hard surfaces. The surface is left clean, dry and smear free.

1 MST FRAME

Durable polypropylene MST frame.

Used for laminate wood, glass and general areas.

994229 - Yellow Pad

4 WHITE MICROFIBER PAD

Anti-static microfiber pad. Used for mirrors, digital displays and internal windows.

994228 - White Pad

5 BLUE MICROFIBER PAD

Used for laminate wood, glass and general areas.

994226 - Blue Pad

STUNNING DESIGN, OPTIMUM EFFICIENCY

WHY SPACESAVING?

When folded down, the base trolley achieves a footprint of just 20" x 22", the same as an average mop bucket.

SYR SPACESAVER TROLLIES

Ideal for limited storage space. Light and manoeuvrable, they are big on versatility, with a huge choice of add-on equipment. Several world patents are linked with the innovative trolleys and one of these allows bins and buckets to be wheeled along with the trolleys, rather than lifted on and off. Spacesaver trolleys were developed to fit in with every concept of mopping combo that SYR manufactures so they really can be tailored to meet specific needs.

MADE TO ORDER

CHOOSE THE RIGHT SPACESAVER TROLLEY BASE FOR YOU

NEW 

STANDARD BASE TROLLEY

Tailor a mobile trolley system to meet your specific needs. Solid base works as a low shelf.

993527 - Standard base

BLUE VINYL WASTE BAG

An optional blue vinyl waste bag for the Compact cleaners cart. 20 gallon capacity. 27.5" x 27.5".

993228 - Vinyl waste bag

NEW

COMPACT CLEANERS CART

A low cost solution for areas with restricted space. Flip down bin lid. Folding handle allows for easy storage. Complete with yellow bag.

991131 - Compact cart

A GREAT ADDITION TO ANY CLEANING ARSENAL

What is Microfiber?

You've seen it everywhere; from mops to furniture, sportswear to towels – but what is microfiber, exactly? And what makes it so versatile?

The microfibers used for cleaning, are made by fusing polyamide (nylon) and polyester, then splitting them under high pressure. This process creates myriads of tiny filaments, that when woven into tool and wiped over the surface, enables it to lift and absorb microscopically small soil particles (including bacteria).

While the size is important, so is the volume of fibers contained in the tool, and the strength of the weave. Not only does the density determine how effectively the tool will be able to clean, but it can also help to reduce the volume of microfibers entering the waterways – a serious environmental concern.

A quality professional microfiber will be manufactured to strict standards and can offer multiple environmental and health benefits that need to be factored into your cost evaluation, such as:

- > Durability and re-usability can be up to 300 – 500 times
- > Minimal water-use, packaging waste and transportation
- > Elimination of chemical hazards
- > Reduction in strains caused by wring mops,
- > Reduction in risk of slips and falls by leaving floors drier
- > Effective removal of surface contamination reducing the spread of infection

Microfiber cloths may not be as great as some would make them out to be, but the trade-off between their origins and what they can offset in terms of paper towel and cleaning fluid consumption makes them a useful part of your green cleaning kit.

LIGHTWEIGHT MICROFIBER CLOTH

Lightweight cloth. Knitted microfiber textile. Perfect for dust and debris pick up. 16" x 16".

- 992645R - Red
- 992646 - Blue
- 992647 - Green

The Impact of a Clean Washroom on a Business

Toilets and washrooms account for up to 70% of the cleaning spend in most buildings.

Making a good lasting impression is the key to washroom perception, whether that be to encourage repeat business in hotels and restaurants, or to ensure staff health and wellbeing in the workplace.

A spotless washroom helps build customer confidence and establish relationships - 15% of people are unlikely to return to a location where they encountered unclean toilets. An investment in cleaning washrooms is therefore an investment in business growth.

If washroom aren't kept clean and hygienic, loss of custom isn't the only potential consequence. The spread of germs from ineffective cleaning and sanitising can lead to an outbreak of highly infectious

illnesses. Health and safety incidents can negatively affect a business' reputation, while staff absence and injury claims can have a big impact on a business' overall profitability.

Washroom fittings and the range of materials used in surfaces such as marble, stainless steel, slate and glass can make washrooms more complex to clean. Establishing effective and efficient cleaning regimes, using the right color coded products and providing comprehensive training for cleaning operatives is the key to maintaining cleanliness and reducing cross-contamination in the washroom.

It is also important to recognize that over time, processes and places of work change, so it's important that companies refresh products and training if the cleaning need changes. Although you can never totally eradicate bacteria, using the right product, in the right way, in the right environment will minimise risk.

TOILET BRUSH & OPEN BOWL

Floor standing. White bleach resistant polypropylene.

X0146202 - Set
X0172202 - Replacement brush

994227 - Gray Pad

YELLOW MICROFIBER PAD

Used for laminate wood, glass and general areas.

994229 - Yellow Pad

On average 1 MST head does the same job as 30 rolls of paper*

Blue roll has a number of key properties that make it particularly useful across a multitude of working environments and tasks. Unfortunately it is single use, cannot be recycled and is over consumed and used inappropriately. It is very often combined with excess chemical dispensing, which not only leaves surfaces looking unclean and full of smears, but also increases cleaning costs.

So let us introduce you to another option.

SYR Multi Surface Cleaning Tool provides a more cost effective solution with superior cleaning results and can complete up to 80% of the tasks blue roll is commonly used for.

CLEANING EXPERTS,
NOT SALES REPS**

SYR FOCUS

**DISCOVER HOW WE CAN HELP YOUR
BUSINESS UNLOCK ITS TRUE POTENTIAL**

Every environment we encounter is different and our FOCUS team use their expertise to evaluate these unique challenges and provide solutions. We look at every little detail - so you don't have to - and recommend new procedures and equipment which will help your business unlock the key to your cleaning success story.

SYR Focus team can support cleaning improvements across a wide range of sectors:

Retail

Education

Restaurants

Transportation

Healthcare

Offices

Industrial

Hospitality

Our FOCUS team are highly skilled technical advisors with years of industry experience, combined with a passion for advancing cleaning practices. With an investigative, site-focused approach, they can analyze your current cleaning practices, producing a detailed report which offers recommendations and tailored solutions for your business. And when you are ready, they will even train and support your cleaning team – providing workshops, videos, training materials and multiple site visits to help you embed the changes.

WE CREATE

WE DESIGN PUBLICATIONS

From flyers to catalogs and bottles to exhibition stands, our team have the experience and know-how to develop outstanding digital print publications for your business.

WE TAKE PHOTOS

Product and action imagery can be provided in formats and sizes of your choice. High quality images will help users see products in their best light, providing a more professional appearance.

WE CREATE VIDEOS

Take a modern approach to your sales strategies with the support of great online video content such as product tutorials and educational videos.

BENEFITS

- 1 Increase sales through the use of promotional marketing materials
- 2 Utilise high resolution images to help publications stand out and increase online viewer interaction
- 3 Apply your own brand styling to reinforce and strengthen your brand identity
- 4 Communicate information in a clear & concise manner, using info-graphics and images.
- 5 Deliver a memorable buying experience for your customers
- 6 Support your company marketing budgets - let us market your products for you.

Our designers have worked on 1000's of projects and have experience across many different industry sectors. Our creative thinking and attention to detail means there's no compromise on the quality of what we produce.

However, great design alone does not get results. That's why our graphic designers and marketing team work together to create design concepts and marketing materials that fit your business perfectly.
