Mop Bucket with Wringer

REQUIRED TOOLS

NOT INCLUDED

- A. Rubber Mallet
- B. Scissors or Box Cutter

MUST BE ASSEMBLED BY AN ADULT.

Assembly Instructions

1. Insert a donut bumper over the stem of each caster.
2. Insert the casters into the bottom of the mop bucket.

NOTE: Use a rubber mallet to insert the casters. Ensure each caster is secure before use.

3. Leaving the cable ties **on** the wringer basket, carefully slide the notch on the basket over the smaller end of the bucket. The wringer handle should be oriented **away** from the bucket as pictured above.
4. Cut the cable ties using scissors or a box cutter and carefully open and close the wringer a few times to ensure proper operation.

Usage Tips

- For best results, do not fill the bucket more than 2/3 full of water. This prevents dirty water from overflowing when the mop is placed into the bucket.
- When pressing the mop in the wringer, release the handle slowly and do not let go of the handle before fully releasing it.
- For safety, keep hands clear of the wringer and operate it slowly.
