

PURELL® Thermometer Probe Wipes

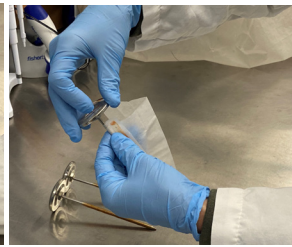

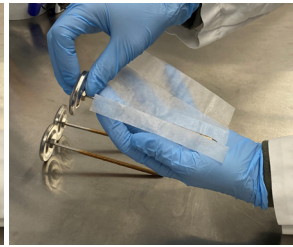

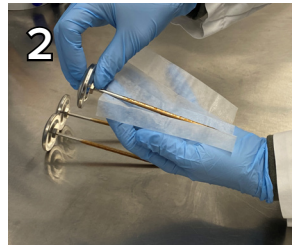

Food thermometer probes should be cleaned before and after being used to test food. When the thermometer comes out of storage, clean it with the wipe, and then begin cleaning between each test. Clean before returning to storage.

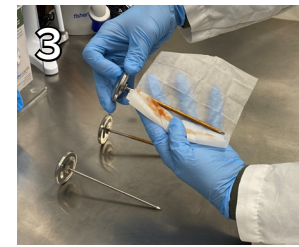

DIRECTIONS

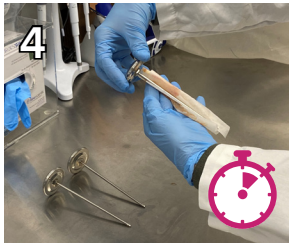

Open package and unfold wipe completely.

Wrap the wipe around the tip of the probe and wipe from top to bottom using a twisting motion. Repeat a second time, if needed, using a clean section of the wipe.

Wipe up to 3 probes using the same procedure.

For best results, use wipe within 5 minutes of opening to prevent dry out.

Allow probe to dry before being inserted into food.

Dispose of wipe and sachet in normal trash.
