VENTILATION CONTROL

Your oven could be connected with one of the following connections

1. Exhaust Hood

The oven is located under a Commercial Exhaust hood

2. Exhaust Tube or Pipe

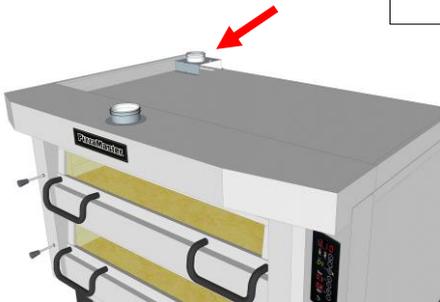

The oven is connected to an Exhaust Tube Ventilation system to the top front and top back of the oven

3. No ventilation

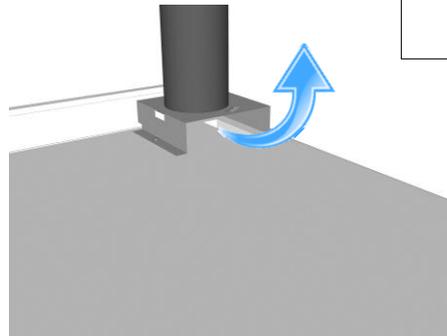

The oven is not connected to any ventilation system

Make these observations and cross all the boxes

4. Flue Diverter

Be sure that the back Flue Diverter is connected firmly to the oven, no matter the type of ventilation connection

5. Flue Diverter Air Circulation

Regardless of the connection, the Flue Diverter Base **needs** to be open in all the cases; this helps the air circulation

6. Warning!

DO NOT remove the Flue Diverter and / or either place any object blocking the ventilation; this affects the baking, oven performance and may cause fire

EXTERNAL CONNECTION CHECK

Check your external breakers or fuses

1. From your **Electrical Circuit Box**, check and identify the position of all the External circuit breakers or fuses for the oven

2. If you have External Circuit Breakers. Check that all the breakers are in **ON** position. **IMPORTANT!** Call an electrician if the Breaker trip again

3. If you have External Circuit Fuses. Check and replace broken Fuses

The largest electric deck oven range in the world, 80 different sizes with over 1 000 combinations – Is Manufactured by,
