

KBT22B Instructions

Installing any 30" wide x 24 deep modular unit on a 48" wide Scotsman Bin including the B948

The purpose of this kits is to be able to install a 30" ice maker on a 48" wide bin.

Kit content: left and right filler plates and one tube of silicone sealant

1. Ensure that the environment and utilities will meet the specifications listed in the ice machine installation manual.
2. Place the machine on the bin. The machine needs to be centered evenly from left to right.
3. Using the supplied silicone sealant apply a bead of silicone to the visible bin gasket. The bin gasket is the gray foam tape around the perimeter of the bin.
4. Place the left filler plate to the left of the machine the three rivets should be facing to the ice machine.
5. Place the right filler plate to the right of the machine the three rivets should be facing to the ice machine.

Note: The filler plates should not be underneath the ice machine. They should be sitting next to it.

6. Place a bead of silicone sealant along the top edge of each filler plate next to the ice machine. The silicone sealant is to fill the void between the ice machine and the filler plate. This void should be less than 1/4 of an inch. If it is greater than that then to readjust the filler plates and/or the positioning of the ice machine.
7. Wipe off any excess of silicone sealant.
8. Proceed with the remainder of the installation per the installation instructions supplied with ice maker.
