

BETTER PACK[®] 555e SERIES BRUSH INSTALLATION INSTRUCTIONS

Place brush as shown, resting on top of retaining clip and leaning against the front edge of the water tank.

With equal pressure on both sides of the brush, push down on the brush base to slide the base of the brush between the water tank and retaining clip.

Brush should sit as shown above when fully installed. Note how the retaining clip only presses against the brush base and does not hold it down from the top.
