REFRIGERATION SYSTEM

ONE PART PASSION, TWO PARTS SCIENCE.

Breeze

IT'S A BREEZE.

Owning a refrigerated display case shouldn't be hard work. That's the idea behind Structural Concept's newest refrigeration system, BREEZE™. Found in select Encore, Oasis, and Renaissance merchandisers, the BREEZE refrigeration system combines robust dependability, unmatched ease of service, and superior temperature consistency.

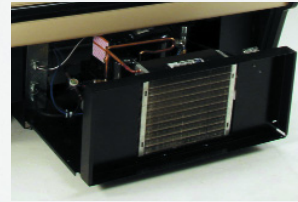

BREEZE BENEFITS

- **Rugged and reliable.** We've designed the BREEZE refrigeration system not for a laboratory, but for the real world. BREEZE accommodates less than ideal conditions. It is designed to run longer while requiring less service.
- **Quick and easy to maintain.** No-one has extra time on their hands, so we've designed BREEZE for rapid, simple service. BREEZE's components can be easily reached for cleaning or adjustment, without tools. BREEZE's microprocessor does more than control defrost cycles, it also performs its own troubleshooting making service calls shorter and less expensive.
- **Superior product temperature.** Consistent temperature is the key to product shelf life, and to your profits. We know that fluctuations in temperature compromise food safety and degrade eye appeal. We've designed BREEZE to hold robust temperatures under harsh conditions to maximize shelf life and minimize shrinkage.

At Structural Concepts, we are committed to creating the highest quality and leading-edge merchandising solutions available. While we continue to grow and change, our fundamental goal remains the same—to help our customers grow their business by providing merchandising solutions that help sell more specialty foods, fresh-baked goods, deli products, and flowers.

BREEZE FEATURES

- **Slide-out refrigeration.** BREEZE is the first system truly designed to slide out. BREEZE replaces copper tubing – that can kink or break – with flexible synthetic hosing. This allows the system to repeatedly slide in and out, without refrigerant leaks or blockages.
- **"Smart" Microprocessor.** BREEZE's microprocessor recognizes ambient conditions and adjusts the duration of the defrost cycle automatically – longer when there's more ice on the coil and shorter when there's less. This eliminates ice buildup and temperature degradation associated with mechanical time clock systems.
- **Computerized troubleshooting.** BREEZE's smart microprocessor not only regulates case temperature, it performs a series of sophisticated diagnostic tests and informs the service technician of any problems. This eliminates time-consuming troubleshooting, which shortens service calls.
- **Oversized condenser coil.** Our oversized coil takes strain off the motor and consumes less energy. That means a longer life for the refrigeration system and stronger performance overall.
- **Magnetic filter.** We've designed BREEZE to overcome the dirty build-up that blocks airflow and degrades performance. Our magnetic filter removes without tools for quick and easy cleaning.
