# STAY FRESH PACKAGING

*"This is an absolute game changer. It allows our products to remain preservative free while making them shelf stable."*

Eric Braddock  
Owner & Executive Chef

**Our new MAP packaging maintains freshness without preservatives & eliminates the need for refrigeration!**

We take great pride that all of our products are preservative free! However, having no preservatives makes prolonged freshness a challenge. We are proud to announce that we are switching to Modified Atmosphere Packaging (MAP).

MAP is a method of packing and preserving food by changing the air composition around it. MAP replaces oxygen, which promotes spoilage, with other gases, like nitrogen and carbon dioxide, to slow down the aging and spoilage process.

## OAT
