ThermoWorks

NODE™

Wi-Fi Temperature Monitor

Worldwide Access
Protect what is important to you, wherever you go. Read your temperatures from the next room or anywhere in the world.

Big Bold Display
While NODE sends you all the data remotely, it still comes with a large display for easy reading from across the room.

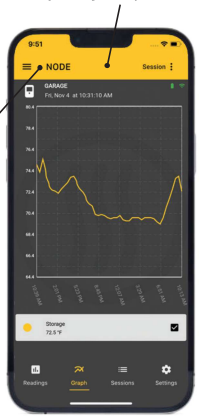
Year-Long Battery
Depending upon your settings, NODE should have enough battery power for a year. Or connect to AC Power with the included adapter.

Ambient or Probes
Track either ambient temps only or up to two external probes with suction cups for easy placement. Works with all Pro-Series® Probes.

Monitor Your Temps
Set your intervals and NODE will monitor and graph all your critical temps and save them to the cloud. Look for patterns over time and make adjustments.

Splash-Proof Durability
NODE is built with a rugged, reinforced housing and molded-in seals for protection against moisture and drops.

24/7 Monitoring
Works with FREE ThermoWorks app. Easily connects to your existing Wi-Fi Network with just a few taps of your phone.



Get Notified
Set high and low alarms. NODE tracks the current temp and sends push notifications to your phone when there's an alarm.

Wherever temperature is important, put a NODE there and read it on your phone!
