

COPOLYESTER

Eastman Tritan™ Copolyester, the industry standard for shatter resistant drinkware, is perfect for outdoor occasions—especially pools, seaside destinations, and exposed decks. With brilliant clarity in many shapes and sizes, from barware to wine glasses, it is the choice option for cold beverages under the hot sun. BPA-free and heat resistant, Copolyester stands up to frequent dishwashing, and based on drop tests, it holds up against cement better than acrylic—bouncing instead of breaking.
