

# More Energy Savings!

- Look at real meal time usage
  - Rarely is the toaster in use continuously
    - Heat up times require a standard toaster to run continuously to be prepared for a spike in demand
  - Most mealtimes see the toaster used 50% of the time (yours may vary)
  - With ECO 4000 featuring “Toast Now” technology, you start the toaster only when needed allowing you to capture \$ savings during peak meal times as well! (based on 2800W toaster)
    - 3 hr meal “full on” usage – 8.4 KWhr or \$.89/meal
    - 50% usage during 3 hr meal – 5.2 KWhr or \$.55/meal
    - Savings of \$.34/meal or \$365/yr just in efficient mealtime usage with no loss of ability to serve the customer!
