INTRODUCTION

Thank you for purchasing a Federal Industries display case. This manual contains important instructions for installing and servicing the Refrigerated Self-Service Merchandisers. A repair parts list and wiring diagram are also included in the manual. Read all of these documents carefully before installing or servicing your case.

NOTICE

Read this manual before installing your case. Keep this manual and refer to it before doing any service on the equipment. Failure to do so could result in personal injury or damage to the case.

NOTICE

Installation and service of the electrical components in the case must be performed by a licensed electrician.

The portions of this manual covering components contain technical instructions intended only for persons qualified to perform electrical work.

DANGER

Improper or faulty hookup of electrical components in the case can result in severe injury or death.

All electrical wiring hookups must be done in accordance with all applicable local, regional, or national standards.

SERIAL NUMBER

Record the model and serial numbers	s of the case for easy reference.	Always refer to both	model and serial
numbers in your correspondence reg	arding the case.		
Case Model	Serial Number		

Condensing Unit Model______ Serial Number____

This manual cannot cover every installation, use, or service situation. If you need additional information, call or write us:

WARRANTY/TECHNICAL SERVICE DEPARTMENT

Federal Industries P.O. Box 290 Belleville, WI 53508 Toll Free (800) 356-4206 / WI Phone (608) 424-3331

WARNING LABELS & SAFETY INSTRUCTIONS

This is the safety-alert symbol. When you see this symbol on your case or in the manual, be alert to the potential for personal injury or damage to your equipment.

Be sure you understand all safety messages and always follow recommended precautions and safe operating procedures.

NOTICE TO EMPLOYERS

You must make sure that everyone who installs, uses, or services your case is thoroughly familiar with all safety information and procedures.

Important safety information is presented in this section and throughout the manual. The Following signal words are used in the warning and safety messages:

DANGER: Severe injury or death <u>will</u> occur if you ignore the message.

WARNING: Severe injury or death <u>can</u> occur if you ignore the message.

CAUTION: Minor injury or damage to your case <u>can</u> occur if you ignore the message.

NOTICE: This is important installation, operation, or service information. If you ignore the

message, you may damage your case.

The warning and safety labels shown throughout this manual are placed on your Federal Industries case at the factory. Follow all warning label instructions. If any warning or safety labels become lost or damaged, call our customer service department at 1(800) 356-4206 for replacements.

This label is located on the back of the display case.

CAUTION
HAZARDOUS MOVING PARTS
DO NOT OPERATE UNIT WITH
DISPLAY PANS REMOVED.

This label is located below the display pan.

PRE-INSTALLATION PROCEDURES

Inspection for Shipping Damage

You are responsible for filing all freight claims with the delivering truck line. Inspect all cartons and crates for damage as soon as they arrive. If damage is noted to shipping crates, cartons, or if a shortage is found, note this on the bill of lading (all copies) prior to signing.

If damage is discovered when the case is uncrated, immediately call the delivering truck line and follow up the call with a written report indicating concealed damage to your shipment. Ask for an immediate inspection of your concealed damage item. Crating material must be retained to show the inspector from the truck line.

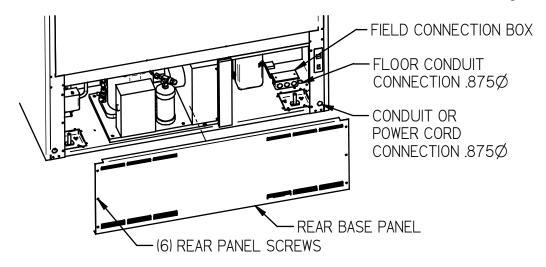

GENERAL ELECTRICAL & GROUNDING

DANGER: Improper or faulty hookup of electrical components in the display case can result in severe injury or death.

Permanent Connected (OPTION)

- -Only a licensed electrician must perform all case electrical connections.
- -All electrical wiring hookups must be done in accordance with all applicable local, regional, or national electrical standards.
- -A separate circuit for each display case is required to prevent other appliances on the same circuit from overloading the circuit and causing malfunction.
- -The electrical service must be grounded upon installation.
- -See the electrical data plate located at the rear of the case for proper circuit size and wire ampacity.
- -The electrical connection box is accessible from the rear of the case with rear grill removed.

Cord Connected (OPTION)

- -A factory installed optional power cord is properly sized to the amperage requirements of the case. See the electrical data plate located on the rear exterior of the case for the proper circuit size for each case.
- The cord is factory installed protruding from the rear corner of the case.
- -A separate circuit for each display case is required to prevent other appliances on the same circuit from overloading the circuit and causing malfunction.

INSTALLATION INSTRUCTIONS

Locating Display Case

The case should be located where it is not subjected to the direct rays of the sun, heating ducts, grills, radiator, or ceiling fans, nor should it be located near open doors or main door entrances. Also, avoid locations where there are excessive air movement or air disturbances.

The case requires a minimum of 12" clearance at the rear of the unit for air discharge. Do not locate case with back tight against the wall.

No clearance is needed on sides of the unit.

Removing Case From Shipping Skid and General Installation

CAUTION: Do not push or pull against the top end glass, or door frames and do not pull on end panels when removing the case from the skid or moving the case. Case damage or glass breakage will result.

- 1. Remove crate top and sides and note missing or damaged items as explained in the pre-installation procedures outlined above.
- 2. Move the case as near as possible to the final location and before removing it from the shipping skid.
- 3. Remove the (4) brackets that secure the case to the shipping skid.
- 4. Prepare cabinet according to instructions in this section that pertain to your model.
- 5. Lift the case off of skid and into required position. Only lift the case from under the rear lip and front bottom trim channel above the base. Note: Do not push or pull on front bottom trim channel.
- 6. The case must be level for proper drainage of defrost condensate to the condensate evaporator. Using the wrench provided level and square the case as needed by adjusting the leg leveler in each corner of base. The 6'cases also have a set of leg levelers in the center. These must be adjusted so the base is flat.
- 7. The leveled case must be sealed to the floor using a NSF Listed Sealant.

Cleaning

For initial setup, clean the case as outlined in the "Weekly Cleaning" section of this manual.

REFRIGERATION

Self Contained Models Use pressure gauges to set pressure control.

	SSRC3652	SSRC5052	SSRC5952	SSRC7752	
Refrigeration R404 Charge	30 OZ	32 OZ	34 OZ	36 OZ	
Low Pressure Switch Cut In	80 psi	80 psi	80 psi	80 psi	
Low Pressure Switch Cut Out	20 psi	20 psi	20 psi	20 psi	
High Pressure Switch Cut Out	400 psi				

The self-contained models are shipped from the factory with a completely operational 404A refrigeration system and require no modifications or adjustments upon installation. Case must be installed as per the installation section of this manual to provide proper condensing air cooling.

Self Contained Refrigeration Operation

The unit temperature is controlled by the low pressure side of a dual high/low pressure switch. The compressor will run until either the minimum run timer times out (approx 10 min) or the suction pressure reaches the set cut out point at which time the compressor turns off. The compressor will remain off until the suction pressure rises and reaches the set cut in point of the pressure switch at which time the compressor turns on.

Note: The condenser fan runs continuously.

This unit also has a defrost timer that will shut the compressor off a set number of times per day to insure a full defrost occurs. The compressor will remain off until the either the off time is reached or until the temperature sensor on the coil reaches a set temperature which ever happens first.

Remote Models Use pressure gauges to set pressure control.

	SSRC3652	SSRC5052	SSRC5952	SSRC7752	
Refrigeration R404 Charge	CHARGED IN FIELD				
Remote Low Press. Switch Cut In	50				
Remote Low Press. Switch Cut Out	15				
Remote High Press. Switch Cut Out	400 psi				

Remote Models

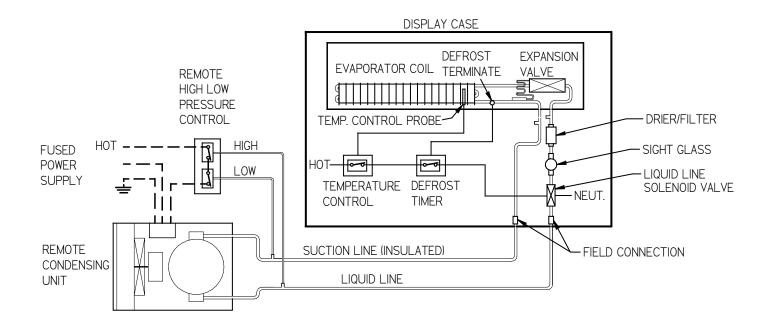

The remote models are designed to use 404A refrigerant and shipped from the factory with the evaporator coil, expansion valve, drier filter, sight glass and refrigerant solenoid valve. A thermostat senses evaporator temperature and opens and closes the refrigerant solenoid valve. The solenoid valve closes and shuts off the refrigeration flow to the unit and initiates a pump down cycle. This will allow the remote low pressure switch to open and shut off remote compressor. The temperature control may require some adjustment by installer for proper operation of unit. This unit also has a defrost timer that will shut the refrigeration solenoid off a set number of times per day (set at factory for 3 times per day) to insure a full defrost occurs. The solenoid will remain off until the either the off time is reached or until the temperature sensor on the coil reaches a set temperature which ever happens first

The condensing unit is optionally supplied from the factory for remote location installation. The condensing unit supplied from the factory will include a high low pressure switch that must be mounted

and wired by the installer. The high low pressure switch must be wired in series with the compressor power supply as shown in diagram below. If the factory is not providing the condensing unit a high/low pressure switch will need to be supplied by installer and installed by installer.

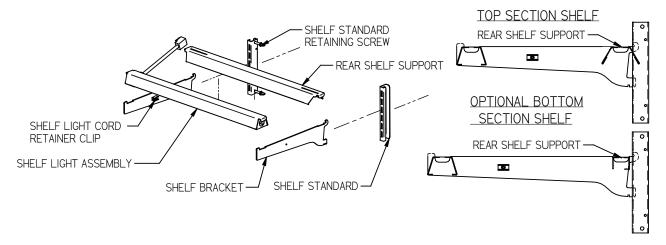

- 1. Mount condensing unit indoors as close to the remote display case as practical. The refrigeration line should be as short as possible and must not exceed 30 feet.
- 2. All refrigeration and/or electrical materials between the condensing unit and display case are to be supplied by installing contractor.
- 3. Route properly sized and designed refrigeration lines from the condensing unit to the cabinet. Horizontal suction lines should be pitched downward towards the condensing unit at least ½" per 10' run to aid the oil drainage. A "P" trap must be installed in the suction line at the foot of every riser to insure oil return. Dry nitrogen must be used to flow through tubing while brazing refrigeration lines.
- 4. Suction line must be insulated the entire length with Armaflex (or equivalent). Do not run liquid line inside insulation with suction line.
- 5. The remote high/low-pressure control must be mounted, wired and set pressures by the installer.
- 6. Leak check condensing unit, cabinet, and all connecting tubing. Cabinet and condensing unit tubing should be checked to insure no leaks occurred during shipping or from rough handling.

 Make certain all refrigeration valves are opened and evacuate system to 500 microns. Charge the system with refrigerant type specified on the data plates.

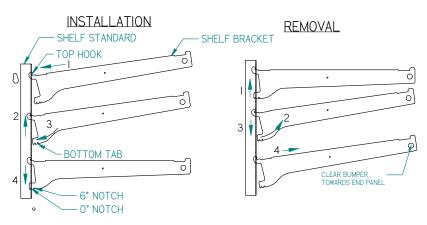

SHELVING INSTALLATION & REMOVAL

Shelf Bracket & Supports Installation

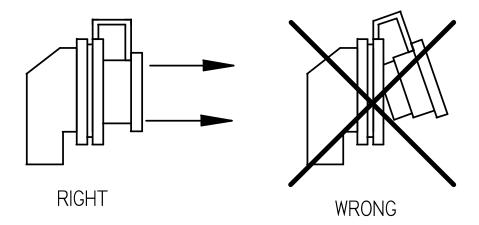

- 1. Turn the light switch to the off position. Remove rear doors as described in the "Rear Door Removal" section of this manual to allow access to interior of case.
- 2. Follow the instruction in the illustration below and insert (1) of the (2) shelf brackets in the desired shelf standard slot on one side of the case. Place the additional shelf bracket in the same shelf standard slot on the opposite end of case. The bracket with a shelf light cord retainer clip must be on the side with the shelf light receptacle.

- I. Place shelf bracket top hook into desired shelf standard slot
- 2. Lift shelf bracket top hook to allow shelf bracket bottom tab to clear shelf standard slot.
- 3. Swing shelf bracketbottom tab into shelf standard slot
- degrees onto bottom of shelf standard slot.
- I. Lift shelf bracket up to allow shelf bracket notch to clear the bottom of shelf standard slot.
- 2. Swing shelf bracket bottom tab out of shelf standard slot.
- 3. Drop shelf bracket down to allow shelf bracket top hook to clear top of shelf standard slot.
- 4. Place the desired shelf bracket notch of 0, 6, or I2 4. remove shelf bracket top from shelf standard slot.
- 3. Hang one end of shelf light housing on the front notch of a shelf bracket and then the other end of shelf light housing on the notch of the shelf bracket on the opposite end.
 - NOTE: On models without shelf lights, use a shelf support instead of a shelf light housing.
- 4. Push shelf light cords into plastic shelf cord retainer clip located on inside of shelf bracket.

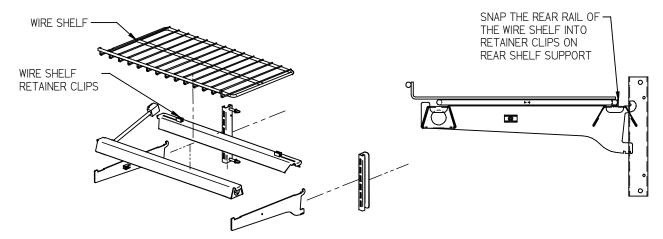

5. Remove the cap from the appropriate female light sockets.

IMPORTANT: Grip each side of cap firmly and wiggle and pull cap straight out of socket. Do not roll cap during removal. Incorrect removal of cap may cause damage to electrical connection.

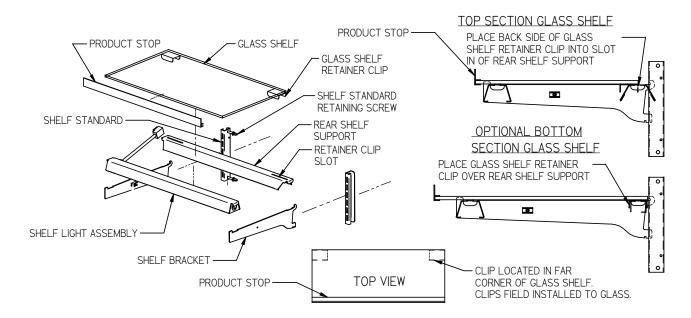

- 6. If the socket is not being used for a shelf light, the cap must be plugged into socket for entire light system to operate.
- 7. Plug in each shelf light by aligning the male pins on the appropriate shelf light cord plugs with the female light sockets and push together. **IMPORTANT:** Do not roll plug during insertion.
- 8. Hang one end of the shelf support on to the rear notch of one shelf bracket and then on the rear notch of the shelf bracket on the opposite side. NOTE: If the bottom open section shelf is supplied instead of step risers, the bottom rear support is not the same as the top rear support. See illustration above.
- 9. Place supplied shelving onto shelf supports as outlined in the appropriate "Shelf Installation" section of this manual.
- 10. Removal of shelving is performed by following steps in reverse order.
- 11. The shelf standards are removable from case by removing the (2) shelf standard retaining screws holding them to the inside wall of case.

Wire Shelves Installation

- 1. Install shelf brackets & shelf supports as described in Shelf Bracket & Supports Installation Section of this manual.
- 2. Place the front of wire shelf onto front shelf light. (On front shelf support for models without shelf lights)
- 3. Snap the rear of shelf into the clear plastic clips on rear shelf support.

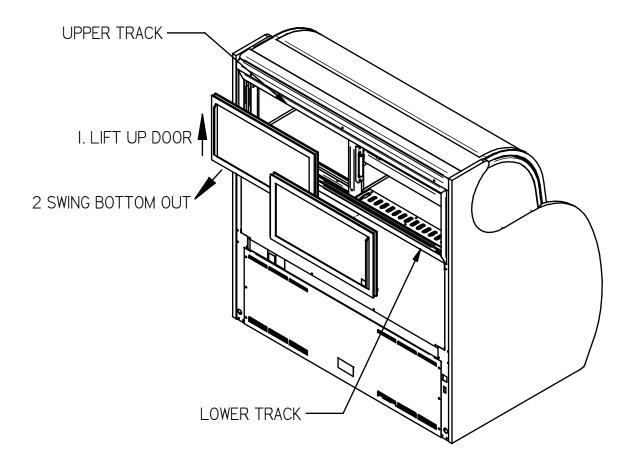

Glass Shelves Installation

- 1. For first time installation attach (2) glass shelf retainer clips to each glass shelf in location shown in illustration. Clean area of glass where glass shelf holder is to be located with rubbing alcohol and let air dry before installing shelf glass holder. Remove backing from tape located on flat side of glass shelf holder. Position the glass shelf holders in the (2) far corners of glass. Repeat for each glass shelf.
- 2. For first time installation attach (1) product stop to each glass shelf as shown in detail above. Align the product stop edge with the edge of the glass and push the "U" portion of the product stop on to glass lip across the entire front of glass.
- 3. Attach a clear bumper on both sides of the light housing top surface for the front of the glass to set on. This step may have already been performed at the factory for you.
- 4. Place front of glass shelf onto clear bumpers on front shelf light. (On front shelf support for models without shelf lights.)
- 5. If clear plastic clips were factory-installed on top of rear shelf support, remove and discard clear plastic clips.
- 6. For top section glass shelf set the rear of the glass shelf onto the rear shelf support so that the back side of the glass shelf retainer sets into the slot on the rear shelf support. For optional bottom section glass shelf set the rear of the glass shelf onto the rear shelf support so that the back side of the glass shelf retainer straddles the rear shelf support

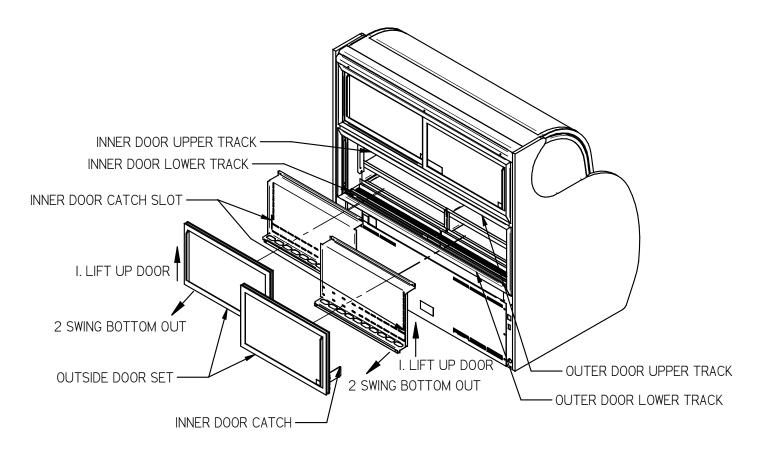

REAR DOORS

TOP SECTION REAR DOORS

- 1. Start with the outer door and lift the door upward until the bottom edge of door clears the lower track and then swing the bottom of the door outward and down out of upper track.
- 2. After the outer door is removed repeat the procedure for the inner door.
- 3. Reverse this procedure for door reinstallation. The doors are not interchangeable.

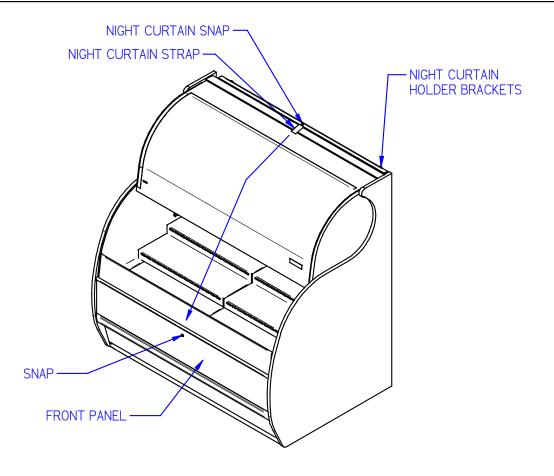

BOTTOM SECTION REAR DOORS (OPTIONAL)

- 1. Start with the outer outside door and lift the door upward until the bottom edge of door clears the lower track and then swing the bottom of the door outward and down out of upper track.
- 2. Remove the outer inside door using the same procedure.
- 3. The inner door set can then be removed using the same procedure starting with the inner outside door followed by the inner inside door.
- 4. Reverse this procedure for door reinstallation starting with the inner inside door followed by the inner outside door. Check that the doors slide freely.
- 5. Replace the outside inner door and the outside outer door. Be sure to slide the inner door catch into the inner door catch slot for each door.

Note: None of the doors are not interchangeable and they must be replaced in the same location that they where removed from.

NIGHT CURTAIN (OPTION)

OPENING:

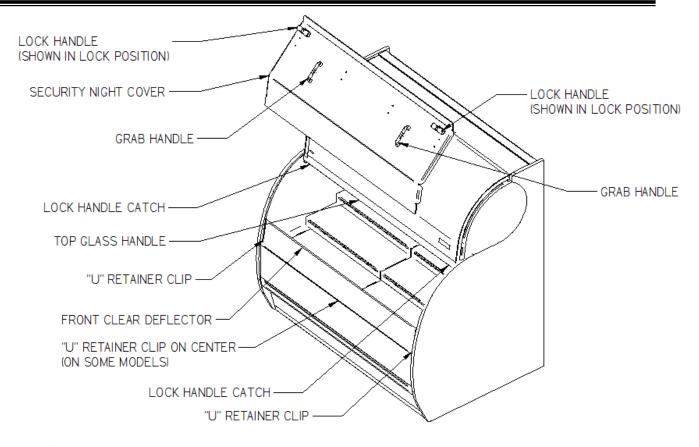

- 1. Grab night curtain strap and lift the rolled night curtain out of the night curtain holder brackets. Pull the night curtain across the top of case and down the front.
- 2. Attach the snap located under the night curtain strap on to the snap located on the front trim.

CLOSING:

- 1. Grab the night curtain strap and detach the snap from the snap located in the front top trim.
- 2. While holding the night curtain strap allow the night curtain to roll up and place the rolled night curtain carefully into the night curtain holder brackets.

Note: The 59" and 77" models have (2) night curtains.

SECURITY NIGHT COVER (OPTION)

REMOVAL:

- 1. Unlock the lock handles and turn handles vertical to disengage from lock handle catches.
- 2. Grab the front grab handles and lift the cover straight up out of the case opening.

INSTALLATION:

- 1. Turn the lock handle so the latch handle is vertical to the top of the case.
- 2. Holding the grab handles place the bottom flange of the security night cover inside the "U" retainer clips located on each side of case opening behind the front clear deflector. There also may be a "U" retainer clip in the center of the case that must also engage the security night cover flange.
- 3. Set the top flange of the security cover down against the top glass handle.
- 4. Turn the lock handles so they engage the lock handle catches and use the key to lock them in place.

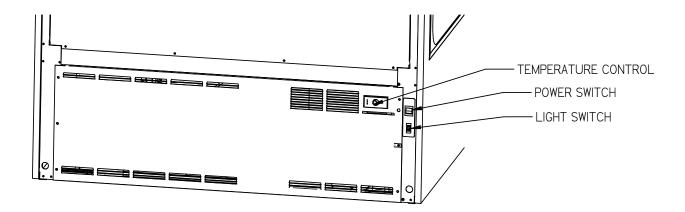

IMPORTANT: Cleaning the Acrylic plastic security night cover require special care to prevent hazing of material. Lightly dust (not wipe) the surface with clean soft cloth. Then the surface can be wiped carefully with a soft, wet cloth or chamois. The cloth or chamois must be kept free of grit by frequently rinsing in clean water. Grease and oil can be removed with kerosene. Do not use window cleaners or kitchen scouring compounds. DO NOT use solvents such as Acetone, Benzene, Carbon Tetrachloride, and Lacquer Thinners. A spray wax such as Pledge or Maguire's polish can be applied and wiped with a clean soft cloth. The wax tends to fill in and hide small scratches

OPERATING INSTRUCTIONS

NOTICE:

This refrigerated display case is designed to operate in a maximum environment of 80 DEG. F and 55% relative humidity. Exceeding these limits will cause poor case performance and sweating of glass panels.

Power Switch

The unit has a power switch that turns off power to the entire unit, including the condensate evaporator and the lights.

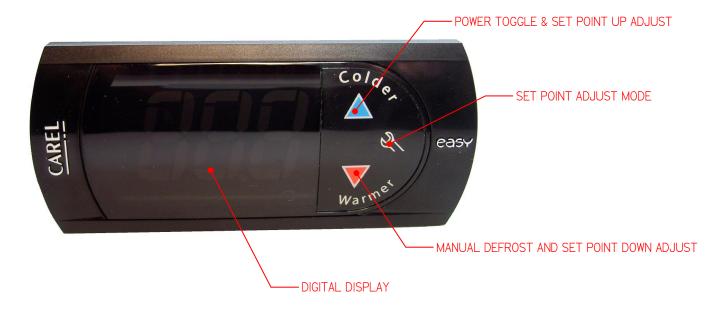

Light Switch

The unit has a light switch that turns on and off the interior lights of unit.

Temperature Control

Located in the rear grille of the display case, the temperature control allows the user to adjust the temperature of the display merchandiser to their needs.

USING THE ELECTRONIC CONTROL

Button and Display Overview

	Press and hold this button for 3s to turn system on (if off) or off (if on). Also used to adjust set point when in set point adjust mode
2	Press to enter set point adjust mode, confirm set point changes, and mute alarms.
	Press and hold this button for 3 seconds to initiate a manual defrost (and cancel defrost if initiated), also adjusts set point down when in set point adjust mode
+	Press both buttons simultaneously to check air stream probe temperature. This is not an indicator of product temperature.

Powering on control

To turn power on to the refrigeration system press and hold, for three seconds, the blue up arrow on the control's keypad. The keypad will read "On" while the button is depressed. When the system powers on, the display will read the current set point (a number "1" through "9"). The orange compressor run indicator will illuminate on the display.

Adjusting the set point

The set point is what determines how cold the display case will hold food and beverage. To adjust the set point press and hold the wrench button until the display begins to flash a number (three seconds). Then use the up and down arrows of the keypad to scroll through the set point options. There are nine (9) available set points, the higher the number of the set point name, the colder the display case will run, with setting "9" being the coldest and setting "1" being the warmest. Once you have chosen your desired setting press the wrench button again to confirm your choice.

Entering manual defrost mode

In order to initiate a manual defrost press and hold the red down arrow for 3s. The control will read "dEF" while the button is being held. The defrost is initiated when the orange snowflake appears on the control display.

Error codes

It is possible for error codes to be displayed on the control screen. In the event of a malfunction an alarm will sound and a red ringing bell will be displayed on the screen. An error code or codes will flash intermittently on the display. If there are multiple codes, the display will continuously cycle through them. The following photo shows error code "EO" as an example next to the red bell.

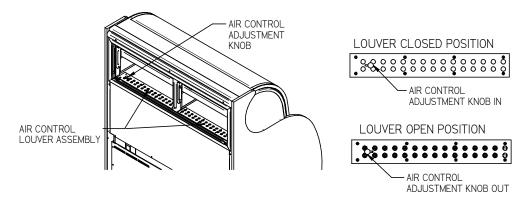

You may mute the alarm by pressing and releasing the wrench button. The red ringing bell and all error codes will still be displayed. When the fault is remedied the control will return to normal operation and will automatically clear the codes from the display.

INITIAL STARTUP

After all the checks outlined in the installation section of this manual have been made, the case is ready to be put into service. Turn on the Power at the breaker box and flip the Power Switch and Light Switch on unit to the on position. Also ensure that the control is powered on as described above.

At start up from a warm unit, it is recommended that the temperature control is set to a warmer setting, such as 1. After the unit has gone through several cycles, adjust the control to a mid range setting, then to a colder setting if necessary to maintain desired product temperature

Top Section Refrigeration Louver Control

The top section of this unit can be changed from a refrigerated section to a non refrigerated section by opening or closing the louver. Unlock the louver position by loosening the control knob (turn control knob counter clockwise) and lock the louver position by tightening the control knob (turn control knob clockwise). Sliding the air control knob out will open the louver making the top section refrigerated and sliding the air control knob in will close the louver making the top section non-refrigerated (see illustration above). Even with the louver in the closed position the top section will be colder then ambient. If a refrigerated section is required for potentially hazard food the air control louver must be completely open. A half open louver will not allow sufficient air flow to top section. The air control louver assembly can be placed in the case in either direction. The air control knob can either be facing the inside or the outside of the case. The side that the air control knob is facing will not effect case operation.

NOTICE:

If a top refrigerated section is required for potentially hazard food the air control louver must be completely open. A half open louver will not allow sufficient air flow to top section.

Placing Product into Case

- Do not exceed 75 pounds of weight per shelf. Heavy product should be distributed evenly across the entire shelving area.
- Determine desired shelving location and angle before placing product in case. Product must be removed to readjust shelf location and angle.
- Allow a minimum of 2" between top of product and bottom of shelf as shown in diagram below.
- Do not overhang the front or rear of shelves with product. Improper clearance in front and rear of shelf will block the refrigerated airflow and will cause product loss.
- -Do not block the slots along the front and rear air discharge slots. Covering these slots will block the refrigerated airflow and could cause product loss.
- -The display deck is removable for cleaning and can become dislodged in shipment. To ensure proper airflow and performance of the case, make sure that the display deck is pushed completely down into evaporation tub.
- -Allow refrigerated models to run for at least two hours before placing pre-chilled product into unit.

NOTICE: CASE MUST BE STOCKED WITH PRE-CHILLED PRODUCT ONLY.

NOTICE: This refrigerated display case is designed to operate

in a maximum environment of 80 DEG. F and 55% relative

humidity. Exceeding these limits will cause poor case

performance and sweating of glass panels.

MAINTENANCE

Top Light Bulb Replacement

- 1. To remove bulb from top light housing, grip the bulb receptacle end caps at each end of bulb. Pull the bulb receptacle end caps straight outward away from unit.
- 2. The bulb is inside a clear shatter proof tube with a white plastic end cap on each end. Be careful not to allow bulb to slide out of shatter proof tube.
- 3. Reinstall new bulb in to the existing shatter proof tube and reuse white plastic end caps. Reinstall bulb assembly in the same manner as described in the Bulb Removal Procedure. Be sure bulb is secure in bulb receptacles
- 4. Reinstall new bulb in the same manner as described in the Bulb Removal Procedure. Be sure bulb is secure in bulb receptacles. **Note: Be sure to use a direct equivalent to the original bulb.**

Shelf Light Bulb Replacement

- 1. All shelf light fixtures use a spring-loaded socket at one end. To remove the bulb push the bulb towards the spring-loaded socket until the opposite ends drops out of the socket.
- 2. The bulb is inside a clear shatter proof tube with a black plastic cap on each end. Be careful not to allow bulb to slide out of shatter proof tube.
- 3. Reinstall new bulb in to the existing shatter proof tube and reuse black plastic end caps. Reinstall bulb assembly in the same manner as described in the Bulb Removal Procedure. Be sure bulb is secure in bulb receptacles

Note: Be sure to use a direct equivalent to the original bulb.

PERIODIC MAINTENANCE

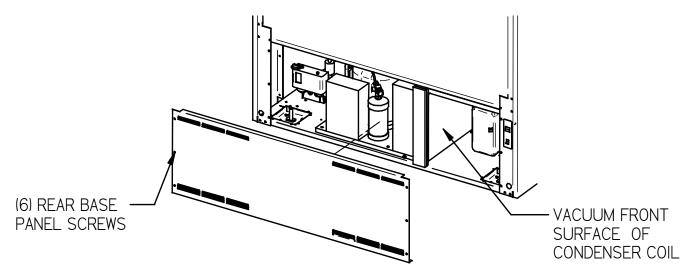

NOTICE:

Condenser coil must be cleaned a minimum of twice per month to insure proper refrigeration performance and prevent compressor failure. Failure to clean condenser coil will void condenser warranty.

Cleaning Condenser Coil (All Self Contained Refrigerated Units)

It is very important that the Condenser coil is cleaned twice per month to insure proper refrigeration performance and to prevent compressor failure. Failure to clean condenser coil will void condenser warranty.

- 1. Disconnect power to the unit.
- 2. Remove the back base panel located on the back bottom of unit by removing the (6) front panel retaining screws.
- 3. Carefully vacuum the front surface of condenser coil. Take care not to bend coil fins with vacuum cleaner nozzle.
- 4. Reinstall back panel and retaining screws.

CLEANING INSTRUCTIONS

Daily Cleaning

The case should be cleaned thoroughly, as described in the weekly cleaning section, before it is used for the first time.

	NOTICE:	Avoid splashing or soaking any electrical components with water to prevent electrical damage to the case.
A	NOTICE:	Shut off lights and power switches and remove all product from case. Allow sufficient time for the unit to reach room temperature before proceeding with cleaning.
	NOTICE:	Remove all product from case before proceeding with cleaning procedure.
	NOTICE:	Acrylic front air deflector requires special washing procedures to prevent hazing and yellowing of material.
	NOTICE:	This case is not designed to be cleaned by flushing.

Note: For major spills or foreign material buildup use complete weekly cleaning instructions.

Note: Detergents are not recommended and do not use abrasive cleaners or pads to prevent scratching of surfaces.

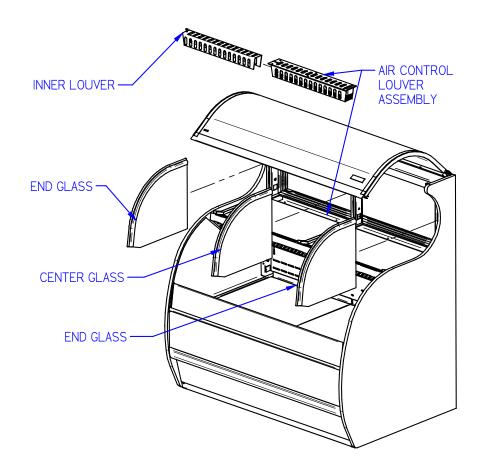

- 1. Clean all foreign materials from the door opening.
- 2. Wipe complete interior of both the upper & lower areas of case using a damp cloth.
- 3. To allow easier access to clean upper section interior tilt the upper front glass open. Tilt the front glass up by standing in front of the case and grabbing the handle at the bottom of the glass and lifting the bottom of the glass upward. The glass can then be cleaned with common window cleaners. Close the glass by pulling the front handle of glass down to the closed position.
- 4. The remaining exterior surface should be wiped down using any ammoniated cleaners or soapy warm water.
- 5. IMPORTANT: Cleaning the clear acrylic plastic front air deflector require special care to prevent hazing and yellowing of material. Lightly dust (not wipe) surface with clean soft cloth. Then the surface can be wiped carefully with a soft, wet cloth or chamois. The cloth or chamois must be kept free of grit by frequently rinsing in clean water. Grease and oil can be removed with kerosene. Do not use window cleaners or kitchen scouring compounds. DO NOT use solvents such as Acetone, Benzene, Carbon Tetrachloride, and Lacquer Thinners. A spray wax such as Pledge or Maguire's polish can be applied and wiped with a clean soft cloth. The wax tends to fill in and hide small scratches.

Weekly Cleaning

This procedure is recommended on a weekly basis. It may need to be performed more often if necessary to maintain a clean, sanitary case. The case should be cleaned to this procedure before using the first time.

	NOTICE:	Avoid splashing or soaking any electrical components with water to prevent electrical damage to the case.
A	NOTICE:	Shut off lights and power switches and remove all product from case. Allow sufficient time for the unit to reach room temperature before proceeding with cleaning.
A	NOTICE:	Remove all product from case before proceeding with cleaning procedure.
A	NOTICE:	Acrylic front air deflector requires special washing procedures to prevent hazing and yellowing of material. Read weekly cleaning procedure carefully.
	NOTICE:	This case is not designed to be cleaned by flushing.

Weekly Top Section Interior Cleaning

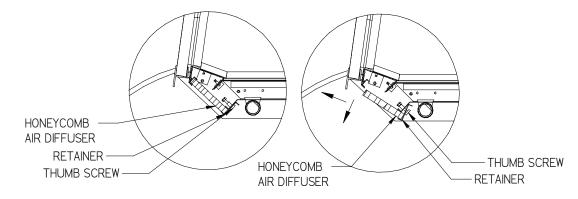

- 1. Remove both upper rear doors as described in the "Door Removal" section of this manual.
- 2. Clean all foreign material from inner and outer rear door tracks and clean both sides of the doors using warm soapy water and a brush. Apply a light film of lubricant such as PAM to door tracks to make the doors operate smoother.
- 3. To allow easier access to clean upper section interior tilt the upper front glass open. Tilt the front glass up by standing in front of the case and grabbing the handle at the bottom of the glass and lifting the bottom of the glass upward. The glass can then be cleaned with common window cleaners.
- 4. With the upper front glass open, remove middle and end glass panels by pulling them forward out of the glass retainer. The glass can then be cleaned with common window cleaners.
- 5. Remove interior shelving from unit as described in the "Shelving Installation and Removal" section of this manual. Remove both shelf standards from interior of case by removing the (2) thumbscrew from top and bottom of each standard.
- 6. Lift and remove the air control louver assembly(s) from the inside rear of case. Unscrew the louver control knob and slide the inner louver out of louver assembly.
- 7. Clean all shelves, shelf support bars, shelf light housings, shelf brackets, and air control louver parts using warm soapy water and a brush. Rinse thoroughly and allow to dry.
- 8. Clean the entire interior of the case using warm soapy water. Wipe off all soapy water with a damp cloth and allow to dry. (DO NOT use solvents such as Acetone, Benzene, Carbon Tetrachloride, and Lacquer Thinners)
- 9. Reassemble all components in reverse order.

Weekly Bottom Section Interior Cleaning

- 1. If supplied with lower rear door option remove both inner & outer rear doors as described in the "Door Removal" section of this manual.
- 2. Clean all foreign material from inner and outer rear door tracks and clean both sides of the doors using warm soapy water and a brush. Apply a light film of lubricant such as PAM to door tracks to make the doors operate smoother.
- 3. If supplied; remove interior shelving or display steps from unit as described in the "Shelving Installation and Removal" section of this manual.
- 4. Clean all shelves, shelf support bars, shelf light housings, shelf brackets, shelf standards and display steps using warm soapy water and a brush. Rinse thoroughly and allow to dry.
- 5. Lift the display deck(s) up and out of evaporator tub.
- 6. Remove the fan shroud assembly by lifting (2) black tabs up on fan shroud assembly retainer latch at each end of the front of the fan shroud and removing the thumb screws from along the rear lip of the fan shroud. Lift the fan shroud assembly and reach in and unplug the evaporator fan motor cord(s). Lift fan shroud assembly out of tub.
- 7. Clean the display deck(s) using warm soapy water and a brush. Rinse thoroughly and allow to dry. Wipe off fan shroud assembly (do not rinse or submerge fan motors).
- 8. Clean the entire interior of the case using warm soapy water. Wipe off all soapy water with a damp cloth and allow to dry. (DO NOT use solvents such as Acetone, Benzene, Carbon Tetrachloride, and Lacquer Thinners)
- 9. Remove the honeycomb air diffuser(s) from upper air duct track. Loosen thumb screws on Retainer located behind diffuser. Retainer will drop down allowing diffuser to be pulled out of case.

- 10. Clean honey comb air diffuser warm soapy water and a brush. Rinse thoroughly and allow to dry.
- 11. Remove the clear plastic front air deflector by lifting it up and out of case. IMPORTANT: Cleaning the Acrylic plastic front air deflector require special care to prevent hazing and yellowing of material. Lightly dust (not wipe) surface with clean soft cloth. Then the surface can be wiped carefully with a soft, wet cloth or chamois. The cloth or chamois must be kept free of grit by frequently rinsing in clean water. Grease and oil can be removed with kerosene. Do not use window cleaners or kitchen scouring compounds. DO NOT use solvents such as Acetone, Benzene, Carbon Tetrachloride, and Lacquer Thinners. A spray wax such as Pledge or Maguire's polish can be applied and wiped with a clean soft cloth. The wax tends to fill in and hide small scratches.
- 12. Reassemble all components in reverse order.

NOTE: Depending on the amount of usage and spillage of foreign material, some fasteners may have to be removed and parts disassembled to allow proper cleaning of the unit.

Weekly Exterior Cleaning

- 1. Clean the front and end glass using any common window cleaner.
- 2. The exterior surfaces should be wiped down using any ammoniated cleansers or warm soapy water.

SERVICE INFORMATION

CAUTION

RISK OF ELECTRIC SHOCK

DISCONNECT POWER BEFORE SERVICING UNIT Before any service work is performed on the case, make sure all power is disconnected to the case.

Service problems or request for repair parts from authorized service agencies, trained service personnel, or owners should be referred to:

CUSTOMER SERVICE DEPARTMENT

Federal Industries P.O. Box 290 Belleville, WI 53508

Toll Free: (800) 356-4206 / WI Phone (608) 424-3331

Fax: (608) 424-3234

Special Service Situations

There are rare occasions when the refrigerant charge must be evacuated from a case in order to perform service work. In those situations, Federal Industries recommends that the refrigerant charge be evacuated into a recovery system to prevent the possibility of hydrofluorocarbons (HFC's) from being released into the atmosphere.

If moisture or liquid is observed around or under a Federal Industries case, an immediate investigation should be made by qualified personnel to determine the source of the moisture or liquid. The investigation made should determine if the case is malfunctioning or if there is a simple housekeeping problem.

Moisture or liquid around or under a case is a potential slip/fall hazard for persons walking by or working in the general area of the case. Any case malfunction or housekeeping problem that creates a slip/fall hazard around or under a case should be corrected immediately.

Pre-Service Checklist

You may avoid the cost and inconvenience of an unnecessary service call by first reviewing this checklist of frequently encountered situations that can cause unsatisfactory case performance.

CAUTION: Before servicing case turn off power at the main breaker of fuse

box.

Case Does Not Operate

- -Check for disconnected power supply.
- -Check for tripped breaker or blown fuse.
- -Check that power switch is on.

Lights Do Not Operate

- -Check that light switch is on.
- -Be sure light is properly seated in the sockets.

If supplied with shelf light option

- -Check that shelf light cord(s) are tight in the sockets.
- -Plug unused light sockets with socket cap provided with socket.

Case Temperature Too Warm

- -Check that the cold air inlet and outlet slots are not blocked.
- Be sure that the rear doors are closed and tightly sealed.
- -Check for a blocked or dirty condenser coil fins.
- -Check cold airflow. Lack of adequate cold airflow could be a defective evaporator fan or blocked evaporator coil. Check that paper or foreign material is not blocking evaporator. If the evaporator coil is blocked due to excessive frost, turn the power switch "off" position for approximately one hour to defrost.
- -Is the case installed properly to allow adequate air flow to and from condenser?
- -Check that there is no air movement around case causing disruption to air curtain. Such as ceiling fans, heating/AC air ducts, exterior doors, ect.

ELECTRONIC CONTROL OPERATION

This unit is equipped with an electronic temperature control. The control parameters are set at the factory and cannot be manually changed in the field. The pre set control parameters are listed on the chart in the Settings Chart below.

Operation

The control uses two sensors, one located in the air stream and one located on the evaporator coil. The sensor located in the air stream is referred to as the temperature control sensor. The sensor located on the evaporator coil is referred to as the defrost probe.

The temperature control sensor is located on the plastic tub behind the evaporator coil to the left in the cold air stream. The sensor location is critical for proper operation on the unit. Do not move or relocate this sensor.

The coil sensor is strapped to the evaporator coil. This sensor location is critical for proper operation of the unit. Do not move or relocate this sensor.

The temperature control is set to cut in at 39°F (3.9°C). The Temp control cuts out at 26°F (-3.3°C) at the coldest setting "9" and 36°F (2.2°C) at the warmest setting "1".

See "0 **USING THE ELECTRONIC CONTROL**" on page 17 for more details on using the control.

Defrost Cycle

The control is programmed to initiate defrost via two different methods. There are 3 programmed defrost cycles in the case which will initiate a defrost cycle every 8 hours. The unit does not have a time clock so the defrost cycles cannot be set for any specific time of day.

The unit also has an 'On demand' defrost feature that will initiate a defrost when the temperature differential between the evaporator temperature and the air temperature is more than 20°F (11.1°C) for 5 minutes after 30 minutes into the refrigeration cycle (e.g. if the air stream probe measures 42°F/5.6°C or greater and the defrost probe measures 20°F/-6.7°C or lower for five minutes). Once initiated the defrost cycle will terminate when evaporator coil sensor reaches 43°F (6.1°C).

If a manual defrost is required, one can be initiated by pressing and holding the down arrow for three (3) seconds. This is typically unnecessary and should only be performed if special circumstances require it.

CONTROL PARAMETERS

Table 1 - Control Parameters

Parameter Description	Control Setpoint →	1	2	3	4	5	6	7	8	9
Co	ompressor Cut in [°F]				•	39.0				
Cor	mpressor Cut out [°F]	36.0	34.7	33.5	32.2	31.0	29.7	28.5	27.2	26.0
Com	pressor Min On Time					10 min				
Comp	pressor Min Off Time					3 min				
Comp	ressor Max Run Time	90 min								
Defrost Te	ermination Temp [°F]	43.0								
	Time to first defrost	8 hr								
Time to	o subsequent defrost					8 hr				
	Defrost duration					30 min				
Defrost on demand differential [°F]			20.0							
Delay for defrost on demand						5 min				
Time delay to the next defrost on demand						30 min				

ERROR CODES

Error codes may be encountered if either the controller or the display case is malfunctioning. The following is a list of error codes that may be encountered.

Table 2 - Error Codes and Resolutions

Code	Description	Cause	Resolution
E0	Temperature probe	Probe signal is interrupted or	Check to ensure probe wires and quick disconnect
	error	short-circuited	are secure in control.
E1	Defrost probe error	See E0	Check probe resistance to table below. If 0
			resistance is present check wiring insulation. If
			infinite resistance is present check for breaks in
			wiring (meter will likely read overload or very high
			in the mega-ohm range).
			Ensure that probes are wired per the wiring
			diagram provided.
			Replace probe if other remedies fail, or if probe
			resistance deviates from "Table 3" below
EE	Unit parameter	Operating conditions	Remedy abnormal operating conditions. The
	reading error		control is rated to operate in a range of 14 to
EF	Operating	See EE	122°F (-10 to 50°C) and less than 90%RH non-
	parameter reading		condensing.
	error		Replace control if problem persists.

Table 3 - Temperature Probe Common Resistance Chart

Probe Temp	Maximum Resistance $[\Omega]$	Normal Resistance [Ω]	Minimum Resistance $[\Omega]$
32°F (0°C)	27.83	27.28	26.74
77°F (25°C)	10.1	10	9.9
212°F (100°C)	1	0.97	0.94

SALE & DISPOSAL

Owner Responsibility

If you sell or give away your Federal Industries case you must make sure that all safety labels and the Installation-Service Manual are included with it. If you need replacement labels or manuals, Federal Industries will provide them free of charge. Contact the customer service department at Federal Industries at (800) 356-4206.

The customer service department at Federal Industries should be contacted at the time of sale or disposal of your case so records may be kept of its new location.

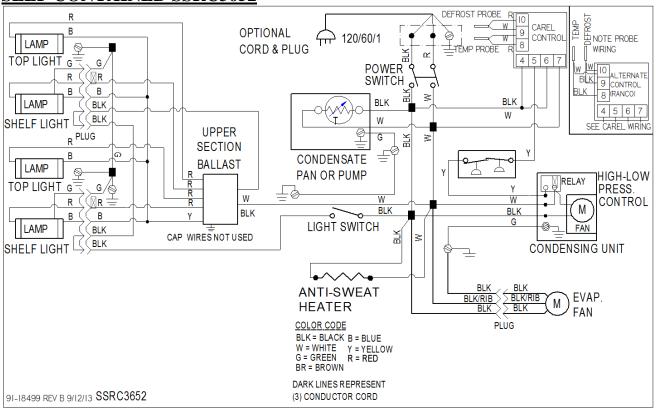

If you sell or give away your Federal Industries case and you evacuate the refrigerant charge before shipment. Federal Industries recommends that the charge be evacuated into a recovery system to prevent the possibility of HFC's from being released into the atmosphere.
