

Table Tops

THE TABLE BASE

Choosing the right frame matters just as much as choosing the tabletop. For Enduro and Euro Slim tops, we recommend a strong, durable frame that can handle outdoor conditions and help reduce the effects of long-term sun exposure. For the best everyday performance, select a frame that properly supports the tabletop, including support through the center.

Single-Pillar Table Base

Recommended table bases for Round or Square Enduro and Euro Slim Tabletops

For best performance, pair your Enduro or Euro Slim tabletop with a sturdy, properly sized frame. The base should help prevent tipping if weight is placed on one side. A four-footed base is preferred over a three-footed base.

For round tabletops, secure the top to the column using either a square metal plate or a metal crosspiece. Make sure the screw points are positioned far enough toward the outer edge of the tabletop while still providing support through the center.

For square tabletops, place the screw points along the diagonals. Screw points should be no more than 8 inches from the tabletop edge, (36" top). Each crosspiece should have at least two screw points, spaced at least 4 inches apart. If using a metal plate, the screw points should follow the same direction as the tabletop corners.
