

How To Use Ice Tube

Please review this information prior to using the Stainless Steel Ice Tube!

1

2

3

4

The Stainless Steel Ice Tube is available in versions for tall Beer Tubes (photos 1 & 2) and Super Tubes (photos 3 & 4), please be sure that you have ordered and are using the correct version.

It is recommended that you fill the Ice Tube with ice cubes or crushed ice and do not add water. After filling, the Ice Tube for the tall Beer Tubes simply snaps onto the top of the tube then the lid is replaced and the Ice Tube for the Super Tube will screw under the lid then the lid is replaced.

If water freezes inside the Ice Tube, it can expand and cause the Ice Tube to crack. Placing the Ice Tube in the freezer prior to use can cause the plastic top to break as well.

Note: Filling the Stainless Steel Ice Tube with water and freezing it can cause the Ice Tube and/or plastic top to break.
