

Easy 4 Step Setup

For your convenience, the Victor® Easy Set® Rat Trap is very easy to use. Get your trap set up by following these four simple steps:

1. **Release the Arm Bar** - Remove the staple and hang the arm over the back of the trap.
2. **Bait the Trap** - While the trap is pre-baited with a scent, apply bait on the plastic pedal for best results. Use a high-protein bait such as peanut butter or hazelnut spread.
3. **Set the Trap** - Pull back the kill bar and hold it securely with your thumb. Place the arm bar over the kill bar and secure it under the plastic pedal. Take note of the Firm and Sensitive setting. The trap will be easier to set on the firm side, but not trip as easy. The trap will be more difficult to set on the sensitive side, but trip very easily.
4. **Place the Trap** - Locate an area with high rodent activity or place the trap along the wall. The trap should be perpendicular to the wall with the yellow trigger plate flush against the baseboard.
