

How to Use Hold-Fast® Disposable Traps

Lay the trap flat or fold into a custom shape so it fits neatly in the area where you've noticed rodent activity. If needed, separate the trap into two by tearing along the perforated edge. Avoid placing the trap in areas where birds or non-target animals may come in to contact with the glue.

Monitor the glue trap every day to check if you've made a catch. Then, dispose of the trap and its contents in the trash. If you would rather humanely release the rodent(s), apply vegetable oil to the glue and use the blunt end of a pencil to release the rat. Replace the trash when full or as needed.
