

How to Use

1. **STEP 1** - To open, unscrew YELLOW cap counter-clockwise.
2. **STEP 2** - Remove battery cartridge and insert batteries. Re-insert the battery cartridge into the Spike. If installation is correct, you will hear vibrating sound within 15 seconds.
3. **STEP 3** - Tighten the cap securely to keep moisture out.
4. **STEP 4** - Make pilot holes prior to inserting the Mole & Gopher Sonic Spikes™. Do not hammer the Spike into the ground, as this could cause damage.
5. **STEP 5** - Insert Spike until the bottom of the cap begins touching the ground.
6. **STEP 6** - Insert Spike completely in the ground. This will prevent damage from a lawnmower. Insert the Spike with the cap flush with the ground. Above the ground, it could be a tripping hazard. Remember where the Spike is located so it may be removed for battery replacement.
7. **STEP 7** - Remove Sonic Spike™ during flooding and before ground freezes.
