

How to Use Poison Peanuts

Victor® Mole & Gopher Poison Peanuts are incredibly easy to use. Note: this product should not be placed in areas that are easily accessible to children and pets.

1. Prior to treatment, determine which burrows are active by pressing down a small section of the tunnel. The burrow is active if the flattened runway is raised again or the roof has been repaired within 48 hours.
2. After identifying active burrows, carefully punch a hole in the top of the tunnels with pointed end of cone.
3. Next, drop in a teaspoon of poison peanuts and carefully close the tunnel with sod or stone.
4. Do not collapse the runway again or allow loose soil to cover the bait.
5. After a few days, check the burrows to see if they are still active. If so, repeat treatment.
6. While wearing waterproof gloves, collect and dispose of exposed dead animals.
