# BACKWALL PANEL INSTALLATION

1. After hood is hung into position, slide the top of the backwall panel behind the back of the hood. If the hood is provided with flat backwall panels, seam strips will be provided. Install seam strips between panels as shown in the flat backsplash panel section view.

2. After the backwall panel and seam strips have been positioned, drill holes in the panel and fasten to the wall.

3. Caulk the joints between the hood and the backsplash panel with NSF Approved silicone caulk. Caulk provided by others.
