## Keep your prepared foods hot and ready to serve with the portable Servit Strip Warmer Kits with adjustable and designer legs

Designed with the operator in mind, the portable strip warmer kits with adjustable T-Legs & designer C-Legs use full length durable metal sheathed calrod elements to provide a high wattage of heating power, hot enough to maintain peak serving temperatures but gentle enough to prevent drying or overcooking.

Its portable design is perfect for use in your cafeteria, restaurant, banquet hall, buffet line, catered event or anywhere that you need to keep prepared foods piping hot and fresh for your customers. It is made with durable corrosion resistant stainless steel and can withstand the wear of constant use.

The convenient 13" designer C-Legs take up minimal room on countertops and can be easily transported, while the adjustable "T" leg Design is adjustable between 10"-16", a great solution for caterers on the go. Despite the reflectors directing constant heat, they do not blacken to provide a consistent heat pattern at all times.

Available in 18-72" configurations. Wattage per inch is the same for all Servit models.

Servit Strip Warmers are backed by an industry-leading 2 year "no hassle" replacement warranty.

WARMER KITS**

**Heat Comparison**

ServIt Strip Warmers keep more area hot with fewer cold zones than the competition. Strip warmers with more cold zones yield more risk of food safety violations and bad impressions to your customers. With ServIt, food remains hot and ready at safe temperatures, without drying out.
