LAVEX™

Push and Pull Plate Kit
Use & Care Guide

11/2026

Initial Setup

Inspect the Packaging: Examine the kit's packaging for any signs of damage that may have occurred during shipping.

Intended Use: Use only as door hardware. Designed for solid-core and hollow-core doors.

Unboxing: Open the packaging with care.

- Do not press a box cutter or knife through the box, as it may damage the plates.
- Ensure you do not damage the plates when removing them from the box.
- If any damage is present, contact customer service immediately.

Installation

Mounting Hardware: Purchase mounting hardware separately. Mounting hardware is not included with this kit.

Plate Placement: Install the push plate on the push side of the door and the pull plate on the pull side of the door.

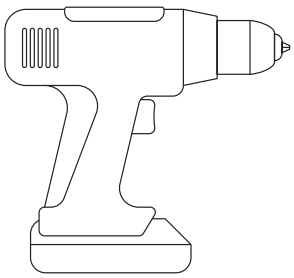

Surface Mounting: Mount each plate to the door surface through the pre-drilled holes. Follow instructions below.

Required Tools (Not Included)

Phillips Head Screwdriver

Powertool - Drill

Powertool - Drill Bit

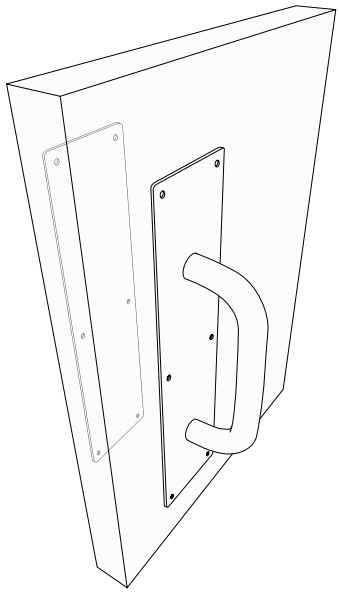

Screws

Use & Care Guide

Assembly

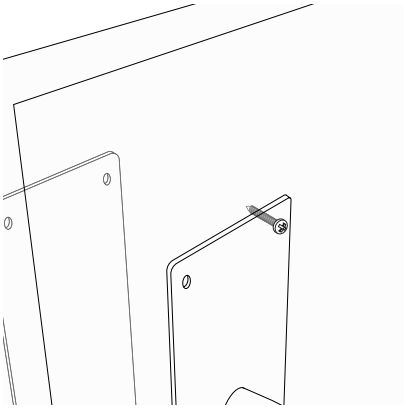

Step 1 - Pre-Drill Holes

- Using the plates as templates, mark and pre-drill the 12 screw holes.

Step 2 - Screw Mounting

- Holding the mounting plate in place, attach the screws in an X pattern doing opposite corners first. Complete for both plates.

Step 3 - Flush Mounting

- Once all screws are installed, check each screw for looseness. Tighten as needed.

Use & Care Guide

Cleaning

Avoid Abrasives: Do not use any abrasive cleaners or pads to clean the plates.

Final Polish: Finish by polishing with a dry, clean cloth.

Preventing Rust on Stainless Steel:

NOTE: To prevent corrosion on stainless steel surfaces, follow these care guidelines.

- **Keep Surfaces Dry:** After cleaning, thoroughly dry the stainless steel to prevent water spots and potential corrosion.
- **Use Only Approved Cleaning Products:** Avoid harsh chemicals, abrasive cleansers, or any cleaning agents not recommended for stainless steel.
- **Avoid Abrasive Tools:** Do not use scrubbers or pads that may scratch the surface.
- **Clean with the Grain:** Always wipe and polish stainless steel following the direction of the grain to preserve its finish.

Removing Rust on Stainless Steel:

Light Rust: Remove light rust with stainless steel cleaner and a non-abrasive pad.

Heavy Rust: For heavier rust, apply a paste of baking soda and water, scrub gently with the grain, then rinse and dry.
