

## Installing the Clips to the Base for 40 Cup Shelf Bin

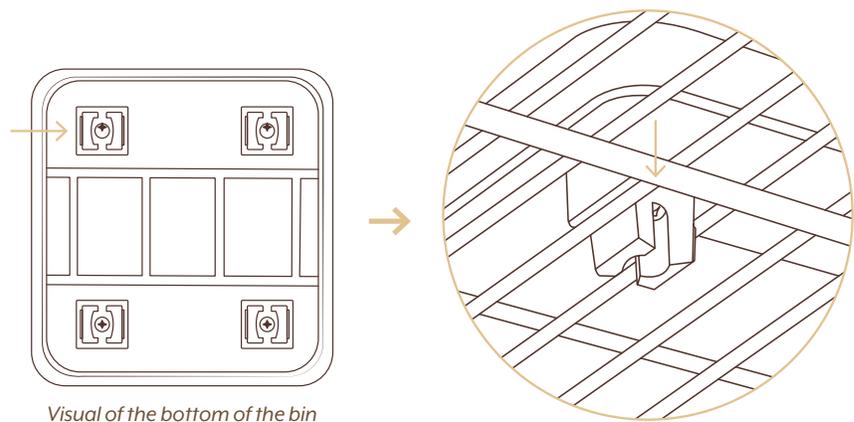

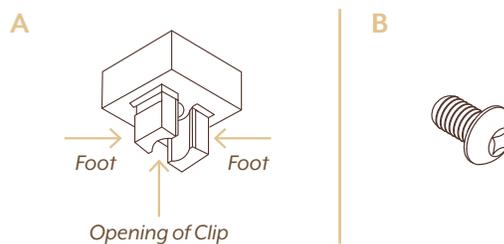

### MATERIALS INCLUDED

- A (4) Front Clips
- B (4) Screws

### INSTRUCTIONS

1. Position the clips with the bottom feet facing out towards the sides of the bin and parallel to the wire shelf rungs. Opening between feet on the clip should be visible from front of bin. Repeat for all 4 clips.
2. Once the clips are positioned correctly, use a screwdriver to tighten the screws. The clips should be held securely on the base of the shelf bin.

**PLEASE NOTE:** We recommend installing these clips with a screwdriver to prevent the plastic threads from stripping. Over-tightening the clips will strip the plastic threads and the clips will not perform. Refrain from using power tools.

## Installing the Clips to the Base for 100 and 200 Cup Shelf Bin

### MATERIALS INCLUDED

- A (2) Front Clips
- B (2) Back Clips
- C (4) Screws

### INSTRUCTIONS

1. Position the two back clips with the bottom foot opening facing the back of the bin. Foot is designed to hook into lengthwise shelf rungs.
2. Position the two front clips with the bottom feet facing out towards the sides of the bin and parallel to the wire shelf rungs. Opening between feet on the clip should be visible from front of bin.
3. Once the clips are positioned correctly, use a screwdriver to tighten the screws. The clips should be held securely on the base of the shelf bin.

**PLEASE NOTE:** We recommend installing these clips with a screwdriver to prevent the plastic threads from stripping. Over-tightening the clips will strip the plastic threads and the clips will not perform. Refrain from using power tools.
