- Helps prevent mold growth in walls, floors, and carpets

24^{hr}
OF UNINTERRUPTED
RESTORATION PROCESS

- Run for at least 24 uninterrupted hours
- Facilitates removal of deep moisture

XTREMEDRY® The Complete System

Water damage professionals use LGR dehumidifiers, low profile air movers, and HEPA air scrubbers to prevent water damage. The LGR dehumidifiers remove moisture from the air, the air movers speed up evaporation, and the HEPA air scrubbers filter the air. With the right equipment, you can do it too!

The Must-Know Trade Secret

Used by Water Damage Restoration Contractors Everywhere!

XTREMEDRY System

Our XTREMEDRY Cart helps keep everything together, just like a toolbox, ready to be used at any time.

It's mobile for fast and easy deployment to different work sites, and compact for easy storage. Setup instructions are included on the cart.

Low Profile Air Mover

These specialized air movers blow air in a vortex pattern to quickly and efficiently evaporate water off of surfaces, including walls and ceilings, greatly speeding up the drying process.

Their sleek, compact, stackable design

LGR Dehumidifier

The key piece of equipment, the LGR dehumidifier pulls moisture from wet, solid materials by creating a dry, desert-like environment with the relative humidity level as low as 25%.

An LGR dehumidifier is necessary, as a standard dehumidifier cannot make it dry enough to trigger the necessary water migration.

HEPA Air Scrubber

This heavy-duty unit filters out mold, dust, allergens, and other harmful particulate that can become airborne during the drying process, while also helping with odor control.

4-stage filtration with a commercial HEPA filter helps eliminate 99.97% of particles down

MULTIPLE USES

The XTREMEDRY® toolkit is versatile, with applications beyond water damage

Quickly Dry Slippery Floors

Control Excessive Humidity

Improve Indoor Air Quality

Any property management team will easily find multiple uses for this set of tools, so XTREMEDRY® will pay for itself many times over.
