

Zap N Trap Wall Sconce

The Zap N Trap utilizes UV technology that peaks at a wavelength of 360Nm, which is proven to be effective for attracting flying insects. Once attracted by the light, the insects are drawn onto the glue board and get stuck in the adhesive.

Zap N Trap units are highly efficient and safe, featuring a modern style. There are no polluting or harmful chemicals emitted that would be dangerous for humans and animals. A complete series of insect control machines is available to suit any area, depending on the coverage required.

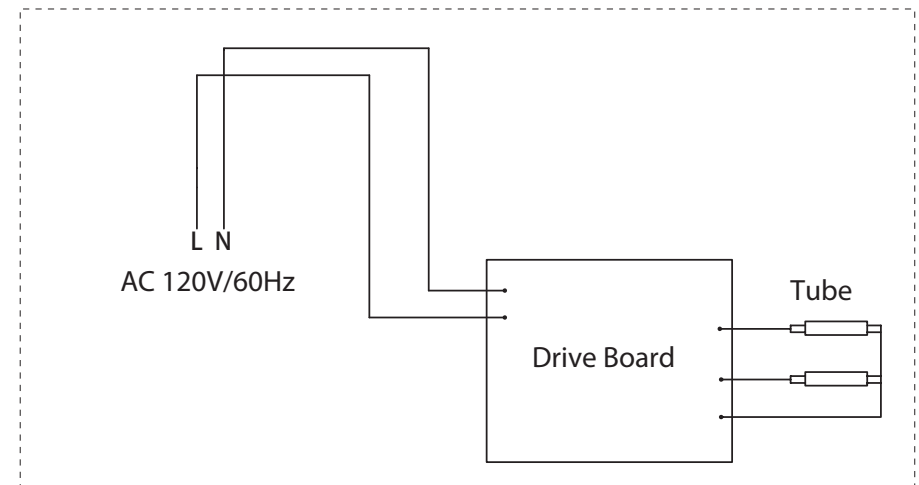

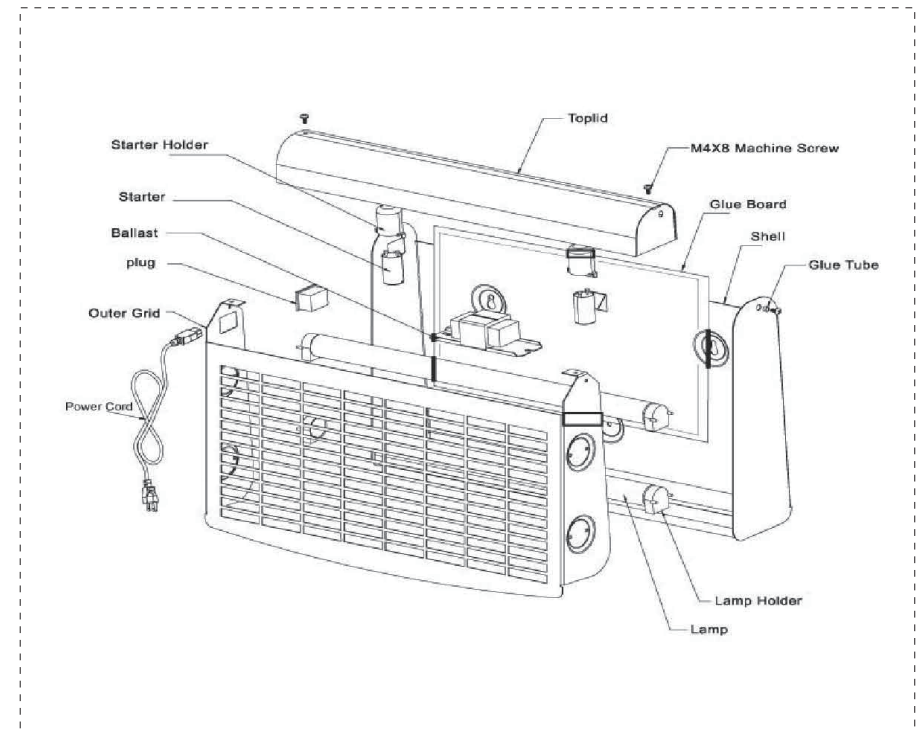

Warnings

- Check the local voltage before installation
- The appliance is for indoor use only. It is not suitable for use in barns, stables, and similar locations. The appliance should not be used in locations where flammable vapors or explosive dust is likely to exist. Hang or mount the appliance out of reach of children (at least 2m).
- To avoid electrical shock, never remove any fixed part of the appliance to make internal adjustments. If the cord, lamp, starter (only in UltraControl units), or any other part is damaged, the manufacturer, service agent, or similarly qualified person must replace it in order to avoid potential hazards.
- Unplug the appliance before cleaning. Be sure to cut off electricity when cleaning and repairing the machine.
- Do not use in flammable and/or explosive areas.
- Repair should be carried out by the manufacturer or qualified electricians.
- Make sure local voltage and frequency are suitable for the machine. Ensure grounding connection to prevent damage or danger.
