

HydroPump

The **HydroPump** is a uniquely designed push pump used to dispense cleaning chemicals into sinks, buckets, or any other cleaning receptacle. Used wherever dispensing of products is desired, the **HydroPump** allows the operator to control the amount of product yielded.

- Resistant to most chemicals, including chlorine, so you won't need to stock two models
- Field-adjustable to deliver 1/2, 3/4, or 1 oz. per push
- Recovers quickly to maintain accuracy if multiple doses are required
- Extremely accurate with both thick and thin products
- Product can be stored up to one foot above the pump for use in confined spaces
- Directional spout or standard tubing available as discharge options

The **HydroPump** is easy to use and requires almost no training. It's just one more way Hydro Systems helps provide dilution accuracy and a safe work environment.

HydroPump dispensers can be customized to meet your company's specific business strategies.

Fundamental to any operation

The **HydroPump** can be used in any kitchen, janitor's closet, or laundry facility. By pushing the pump once, the desired chemical is effectively and efficiently directed into the appropriate container or sink compartment.

HydroPump's decorative skirt gives it an attractive appearance, and an available adapter plate allows it to use the mounting holes from several other brands of push pumps.
