SECT. I PAGE 1

WATER QUALITY REQUIREMENT

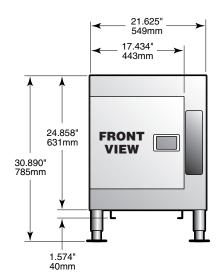

The recommended minimum water quality standards whether untreated or pre-treated, based upon 10 hours of use per day, and a Daily Blowdown, are as follows:

TOTAL DISSOLVED SOLIDS less than 60 parts per million TOTAL ALKALINITY SILICA pH FACTOR

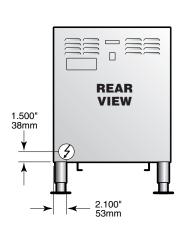

CHLORINE

less than 20 parts per million less than 13 parts per million greater than 7.5 less than 30 parts per million Consult a local water treatment specialist for an on site water analysis for recommendations concerning steam generator feed water treatment (if required), in order to remove or reduce harmful concentrations of minerals. The use of highly mineralized water will mean that more frequent servicing of the steam generator will be necessary. The fact that a water supply is potable is not proof that it will be suitable for the generator.

> · Compartment has capacity for: Five, 12" x 20" x 21/2" deep Cafeteria Pans.
