

Solar Powered Timer | TTS

TTS-8

Production
Line Timer

Ensure product quality and consistency by tracking cooking and holding times. The Solar Timer is a cost-effective solution for monitoring products throughout the cooking process.

Available with eight channels, this reliable timer is solar powered and requires no electricity. It is easy to program and maintain and can control up to two stages of the cooking or holding process. The timer provides audible and visual signals when the cycle is complete. Program times are stored in memory for repeated use.

This model of the TTS-8 features custom programming for use with the production line, with channels designated for specific functions within that area.

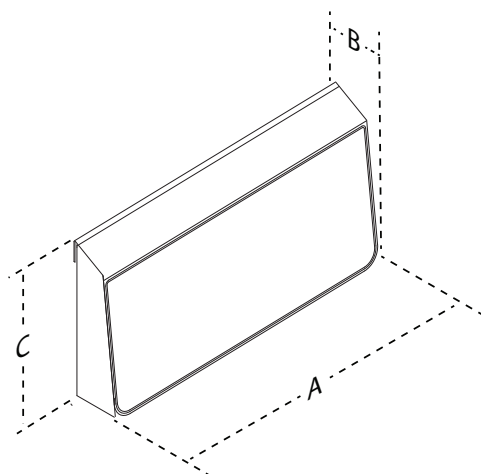

The magnetic mounting panel adheres to most metal surfaces and allows for flexible mounting of the unit. For those areas where no magnetic surface is available, a magnetic mounting bracket is supplied.

FEATURES

- Solar powered—no electrical outlet required!
- Quick and easy to install with no tools needed.
- Two stages—for cooking or holding functions.
- Custom programming for the production line.
- No net increase in labor.
- Eight channels.
- Easy to train crew to use.
