Cutting Speed	50 Feet per Second
Horsepower	1 hp
Installation Type	Countertop
Plug Type	NEMA 5-15P
Power Type	Electric
Type	Band Saws
Usage	Medium Duty

Notes & Details

Easily and precisely cut slabs of meat with the help of this EMBS65SS 65" blade stainless steel countertop vertical band meat saw. Boasting a razor sharp, 65" long blade with 4 teeth per inch and 1 hp motor, this vertical band saw can cut through all kinds of meat for perfect portioning and presentation in your butcher shop or deli. It boasts a sturdy stainless steel construction designed to offer lasting use. Plus, the full stainless steel chassis, head, and work table are easy to keep clean and maintain over time.

Designed with your convenience in mind, this blade has a cutting speed of 3011 ft. per minute so you can work quickly through even the toughest cuts of meat. With max cutting dimensions of 8" x 7", this countertop meat saw can handle thicker portions of meat with ease. For optimal results, use it to cut fresh meat and bones. If you're looking to cut frozen meat, be sure to use a blade for cutting frozen meat (sold separately), and make sure the blade is adjusted and set in the proper position. Precise and consistent cuts can easily be achieved with the built in adjustable fence, which can be locked or unlocked with an intuitive, hand turn locking knob. To ensure the safety of your staff, consider also having them wear cut-resistant gloves (sold separately) as an extra precaution when using this saw. This saw features an open-chassis safety shut-off switch, which will activate if the saw is opened while turned on. This ensures safe use for inspection or while replacing the blades. In addition, an auto shut-off switch will turn the machine off after 30 minutes of continued use to prevent the motor from overheating. The blade guard also protects users from cutting themselves accidentally and features an extra-long side handle to safely open the guard while the saw is turning on, in use, or shutting down.

Best of all, since this is a countertop saw unit, it won't take up as much space in your establishment in comparison to an alternative floor model. Plus, it can be wiped at the end of the night to keep it clean or taken apart for a special deep cleaning. This unit requires a 120V electrical connection for operation.
