Features

- Lights charcoal briquettes for grilling in 20 minutes
- Easy to use
- Durable construction
- Built-in heat shield and nylon handle keep hands cool
- No lighter fluid required

Certifications

Hand Wash Only

Notes & Details

Use this Backyard Pro 5 lb. chimney starter to give your food the grilled, smoky taste that customers crave, without the hassle of waiting on charcoal briquettes to heat up! This simple device is a must-have for any charcoal grill master - simply remove the grates, place the chimney in the grill, and load crumpled up newspaper into the bottom of the starter. Load the top chamber with up to 5 lb. of charcoal briquettes, place the starter on the grill, and light the paper using the bottom vent holes. About 20 minutes later, your briquettes will be lit and can be poured evenly into the grill! This tool also fires up your grill without using lighter fluid, which saves you money and gives peace of mind if you're worried about a starter fluid affecting the quality of your food.

The chimney starter is built for durability over countless barbecues, while a heat shield and heat-resistant nylon handle help ensure your charcoal stays hot, but your hands stay cool.
