## EcoAccess Door

*Your Environmentally Sustainable Solution*

The Chase EcoAccess Door is the perfect combination of reliability, durability, and sustainability. This single-acting door has a door panel constructed of 100% recycled HDPE material, making it an environmentally responsible choice for restaurant, retail, commercial and industrial applications.

# Chase EcoAccess Door

## OVERVIEW

The Chase EcoAccess Door is the perfect choice for interior applications within restaurant, retail, commercial or industrial settings. This door is lightweight, yet incredibly durable, thanks to its three layer core construction. It also offers a range of customizable options, such as lite kits, frames, and more, so you can create the perfect door for your needs.

## DOOR PANEL

Designed with a unique 3-part system, this door panel is constructed of 100% recycled HDPE. The core is 1" thick, clad with 3/8" textured skins on each side to complete the 1 3/4" full panel. The door has a softened edge around the entire perimeter to provide a smooth finish. The door also comes prepped for lockset installation at your desired height. The satin chrome lockset, hinge, and closer are provided in packaging for field installation.

## HINGE

The standard half surface-mounted continuous hinge is made of aluminum and runs the length of the door panel, providing optimal strength and a stylish finish. It is recommended that any hinge used on this door is mounted through the face of the panel using a surface-mounted hinge. Hinges used without this method will cause void of warranty.

## HARDWARE OPTIONS

The EcoAccess door comes standard with a continuous hinge, lockset, and closer. These can be removed if requested. Additional hardware options include stainless steel kickplates and lite kits.

## LITE KIT OPTIONS

Glazing options include 1/4" tempered safety glass or polycarbonate set in a black powder-coated lite kit. Standard sizes include 24" x 30" and 8" x 32". For custom size kits, please contact a sales representative.

## FRAME OPTIONS

Chase offers both hollow metal and stainless steel frames that can be butt-mounted or wrapped for most wall conditions, including insulated wall panels. The frames are available with a variety of mounting systems.

STANDARD OPENING SIZES	COLOR OPTIONS
<p>Single Panel configurations only, for openings up to 48" x 96". Custom sizes available.</p> <ul style="list-style-type: none"><li>• 36" x 84"</li><li>• 36" x 96"</li><li>• 48" x 84"</li><li>• 48" x 96"</li></ul> <p>For paired openings, a mullion must be used with the frame to separate the two panels.</p>	<p>Actual samples should always be requested if color accuracy or matching is key.</p> <p>Black is standard.</p>
