Cooking Performance Group FGC-20-DDLK Deep Depth Double Deck Full Size Liquid Propane Convection Oven with Legs - 120,000 BTU

Notes & Details

Perfect for virtually all cooking and baking applications, this Cooking Performance Group FGC-20-DDLK double deck full size bakery depth liquid propane convection oven package is an invaluable asset to any commercial kitchen. Powered by 60,000 BTU per oven, the unit offers 2 full size cavities that each house 3 adjustable wire racks. These racks rest on the 11 sets of slides along the interior side walls, so you can benefit from a variety of rack configurations to best accommodate your trays or full size food pans. Not to mention, the 30" deep interior offers increased versatility, as a full size sheet pan can fit longways without having to turn the pan. This allows for a greater capacity improved airflow, and a higher output than a standard convection oven.

Reaching temperatures from 150 to 500 degrees Fahrenheit, this oven operates with an electric automatic thermostat on each oven for reliable precision. For safety purposes, each unit also features an automatic ignition system, which activates in the event of a flameout. Plus, if ignition fails 3 times, the unit will automatically shut down.

Cooking convenience is delivered by an assortment of special features that help make your job easier. For instance, a 60 minute timer on each oven helps you keep track of foods' progress while you multi-task in the prep or storage areas. You can also switch each oven's built-in convection fan between 2 modes, cool and cook, and 2 speeds, high and low. This gives you control over the oven's functioning so that it's always operating in the best manner for your tried-and-true or experimental recipes. To visually monitor your dishes as they cook or bake, just flip on the light controlled on the exterior control panel of each oven.

The 2 independent glass doors each oven is outfitted with allow for visibility while closed, giving you the ability to check on dishes without releasing hot air and reducing the chamber temperature. Both the exterior and interior of the ovens are built with stainless steel to offer maximum durability, while the interior floors are made of porcelain. This particular oven package requires a liquid propane and a 120V electrical connection for operation.
