- Durable stainless steel construction
- No additional heat source needed; saves energy
- Comes with an integrated stand and drip tray that can be removed for easy cleaning
- Traditional pull faucet; 1.5 gallon capacity

Certifications

ETL Sanitation

Notes & Details

Keep your coffee hot and fresh with this Estella Caffe 1.5 gallon thermal coffee server with stand. Since it is made to keep coffee warm for up to 4 hours, this server is ideal for hotels, coffee shops, and restaurants.

This server does not require an additional heat source to keep coffee hot, which helps to reduce energy usage and also eliminates the need for power cords, electrical plugs, chafing fuel, or other hot external surfaces. The unit is made of durable stainless steel to stand up to use in a commercial environment without being easily damaged or corroded. It features a traditional pull faucet style for easy dispensing and even has a faucet guard that keeps cups from touching the faucet and prevents cross contamination. This coffee server also comes with a removable integrated stand to provide plenty of clearance for cups, along with a drip tray to catch spills and contain messes.

An integrated lid design with improved functionality improves the efficiency of this coffee server. The lid has a removable funnel system that helps lock in the freshness and aroma of your coffee. It also comes with a pivoting brew cap that is mounted on the lid for easy access. Finally, it has two side handles for ease of transportation and maneuverability.
