## Technical Data

Number of Groups	2 Groups
Number of Steam Wands	2 Wands
Style	Automatic
Type	Espresso Machines
Water Inlet Size	1/2 Inches
Water Source	Direct Connection

## Notes & Details

With a fully automatic design and user friendly capabilities, the Estella Caffè ECEM2 two group automatic espresso machine can help create one-of-a-kind hot beverages for your casual restaurant or coffee shop. This BSPT threaded unit includes 1 single portafilter and 2 double portafilters for superior versatility. It can also dispense a single or double espresso from each group with the four easily programmed settings, or users can choose the continuous flow option. For continuous flow, simply press the button once to begin and a second time to stop. The two group design allows for greater output for your higher volume coffee business. A dual pressure gauge provides readouts for both the water pressure and steam pressure so that your staff members can tell when the unit is ready to use - right at 1.2 bars.

To ensure that your baristas have the best possible experience, this unit has two steam wands and a hot water outlet. Plus, though a daily backwash is still recommended, the auto cleaning function helps minimize maintenance concerns. Other features include a stainless steel heat exchange boiler that helps to ensure temperature stability for consistent, great tasting espresso. This unit requires a 220-240V electrical connection.
