Voltage	120 Volts
Wattage	24 Watts
Capacity	1.25 lb. 1200 mL
Material	Aluminum

Technical Data	
Power Type	Electric
Style	Heated
Type	Butter Spreaders

Notes & Details

Enhance quality while saving time and effort with this Garde cast aluminum heated butter spreader! Designed to hold up to 1.25 lb. (1,200 mL) of butter, this unit allows you to spread melted butter on your bread, bagels, or English muffins with ease. Sure to promote a clean workspace while enhancing workflow efficiency and reducing waste, this spreader is perfect for any restaurant, cafe, or bakery.

This unit's durable cast aluminum construction is built to withstand high-volume use, ensuring that it will remain a reliable and efficient tool in your establishment for years to come. It comes with a heating element to keep butter melted, allowing it to be used on a countertop or worktable. When the spreader is used on a non-heated surface, the element can be inserted and used to keep the melted butter away from the heat source. The spreader fully disassembles for thorough cleaning and sanitation and requires a low butter minimum for use, which helps reduce waste and keep costs down. It also catches excess butter so it can be used again.
