Length	20 Inches
Width	11 1/2 Inches
Height	13 1/2 Inches
Installation Type	Countertop
Material	Plastic
Style	Manual
Type	Bases

Notes & Details

Make up to 180 fresh burger patties or up to 1000 slider patties per hour with this Garde XL BRGPBASE burger press! This model is the base only, so you can purchase all the corresponding mold kits (sold separately) that you wish to use to create burgers in different sizes from 2" to 5" in diameter.

This patty molding machine dramatically reduces labor and prep time so you can offer freshly-made burgers to your customers without spending the additional time to form them by hand. Plus, since this unit is designed to make consistent burgers, you can be sure that whatever mold you use the burgers will always be the same size for consistent cooking and a great customer experience.

Because this model uses a hopper to hold a supply of burger ingredients, it can produce as many as 9 presses from a single loading. This means you don't need to load individual portions of meat mixture before pressing each patty - no weighing or portioning needed!

This patty molding machine can keep up with your business's recipes and volume requirements. When you are finished making burger patties for the day, the unit is simple to disassemble for convenient cleaning.
