

Halifax 421ISSP410PK 44" x 119" Stainless Steel Insulated Wall Panel (For Hood Packages)

Item #421ISSP410PK

Technical Data

Features	Made in America
Type	Wall Panels

Features

- 44" wide x 119" tall
- 1" insulation provides necessary protection for combustible walls
- Provides smooth, wipeable surface for health code compliance
- Each order includes 2 end caps. 1 seam strip included for each panel ordered after first
- Hemmed edges for safety

Certifications

Notes & Details

This Halifax 44" x 119" insulated hood wall panel is designed to help you meet fire and health code requirements on your cooking line! If your kitchen's walls are made from a combustible material like wood, or if they contain wooden studs, this panel will help you achieve the necessary clearance to meet fire safety requirements thanks to a 1" layer of insulation. And since the panel is made from 20 gauge, 430 stainless steel with a #4 finish, it gives further protection against flames while also providing the smooth, wipeable wall surface that most health code regulations require.

Two end caps are provided with your order, regardless of the number of wall panels ordered. These caps are used to secure the sides of your panel installation, whether you have just a few or an entire wall lined with them. The end caps measure 1 1/4" by 119" and feature oval slots in 6" - 8" increments, allowing you to adhere the panels to the wall with countersunk screws. You can also apply the panels to the wall using liquid nail. For every panel ordered after the first, you will also receive one seam strip to join your panels together (For example, if you order 2 panels you will receive 1 seam strip. Order 4 panels and you'll receive 3 seam strips). Hemmed edges and an extra-wide design provide enhanced safety during installation.
