Features	Self-Leveling

Technical Data

Finish	Powder-Coated
Material	Stamped Steel
Type	Table Bases

Notes & Details

Ideal for a wide array of environments, the Lancaster Table & Seating stamped steel 33" x 33" black 4" bar height column table base with FLAT Tech Equalizer is a sturdy, reliable, and attractive choice for your establishment. Made with durable, stamped steel, this easy-to-assemble base kit comes with everything you need, excluding the tabletop. The cross base offers a stable support for the central column, which will combat any rocking or wobbliness. The bar height column is not only great for casual seating, when paired with bar height chairs (sold separately), but also makes for a great standing room only lounge option for entertaining. Its black powder coat finish also gives this base that classic, sleek appearance.

The 4 1/4" to 4 3/8" column diameter is more of an aesthetic choice that still has a similar load rating compared to slightly larger variations; therefore, you can choose from a wide selection of tabletops, which includes some of those heavier options. Within the base column lies a threaded interior column that easily fastens to the spider plate - a pre-drilled, cast-iron plate intended to secure the column to the tabletop. Conveniently, all hardware is included, so there are no additional purchases of screws or small parts for installation.

This kit includes an equalizer to keep tables steady. The Equalizer adjusts up to 1/4" in height and locks in place to stabilize each table, ensuring an ideal, professional dining experience in your establishment. It can also be used to align tables together. Simply tilt or lift a table top in the direction of an adjoining top. The feet will adjust to create a perfectly aligned surface, making it great for large parties that require multiple tables to be pushed together.

The Equalizer is made of reinforced plastic that houses a 1/4"-20 stainless steel thread, allowing it to be installed onto most table bases with existing screw-in feet. The thread compresses into the foot and automatically activates the hydraulic stabilization technology within. It's sure to help prevent customer complaints and accidental spills that may be caused by uneven table surfaces. Additionally, it is impact- and corrosion-resistant, guaranteeing use for years to come. To install, simply remove the existing feet from your table bases and replace them with Equalizers. Each leveler installs in seconds without any required tools. Wherever this attractive base and equalizer kit is placed, and whatever top it supports, it's sure to stand steady and strong for years to come!

Kit Includes:

- (1) base
- (1) FLAT Tech Equalizer
