indoor/outdoor matting

## Rubber

- Unique blend of nylon fibres provide superior scraping action against dirt and debris
- High-quality dyes offer brilliant color fastness and image durability
- Strong rubber backing provides maximum durability in high traffic applications

| Product specifications           |                                       |
|----------------------------------|---------------------------------------|
| Fiber type                       | Nylon 6, Monofilament (50/50)         |
| Dye process                      | Chromojet printed                     |
| Face weight(oz/yd <sup>2</sup> ) | 30 +/- 0.5 oz/ sq yd                  |
| Pile Height                      | 11/32"                                |
| Rubber Polymer Type              | Nitrile                               |
| Extruded Base Sheet Thickness    | 90 MIL Rubber                         |
| Backing Type                     | Gripper & Secure Tread                |
| Edge Thickness                   | 85 MIL +/- 15 MIL                     |
| Border Width                     | 0.69" +/- 0.09                        |
| Mat Weight - Rubber              | LBS                                   |
| 3'X5'                            | 10                                    |
| 4'X6'                            | 14                                    |
| 3'X10'                           | 17                                    |
| Weight Tolerance                 | ± 5%                                  |
| Mat Dimensions                   | FEET                                  |
|                                  | 3'X5'                                 |
|                                  | 4'X6'                                 |
|                                  | 3'X10'                                |
|                                  | Custom sizes available up to 6' width |
| Mat Length and Width Tolerance   | ± 2%                                  |
