Notes & Details

Ensure your Regency gas hose never stretches or overextends when moving equipment with the Regency coiled restraining cable! This 24" restraining cable gives your castered equipment space to move when you're cleaning. It is best used with 36" gas connectors so that the strain and stress of moving equipment doesn't wear out your hose.

The ANSI Z21.69 Standard, section 1.7.4, states that any caster mounted equipment should be installed with a restraining device like this one. Installation hardware is included to facilitate a quick, easy setup.
