Notes & Details

This Regency wall-mounted pre-rinse faucet with sprayer is perfect for rinsing excess food and sauces off of your dishes prior to running them through your commercial dish machine. It includes a 44" long hose and a low flow rate of 1.15 GPM, making it easy to spray across multiple sink compartments. It's designed only for use in janitorial and dishwashing applications and is not intended for applications where the fixture will be used to supply drinking water or water for cooking.

The chrome-plated brass construction of this faucet looks great in any setting. The spring action, flexible gooseneck is easily secured to the wall with the 12" wall bracket, and the convenient sprayer hook secures the sprayer head when it's not in use, keeping it in place and out of the way. Additionally, the faucet handles are labeled and color coded for easy identification of hot and cold water. This unit is completely interchangeable with other brands installed on 8" adjustable centers. An installation kit is required for setup (sold separately).
