Notes & Details

This 0.65 GPM pre-rinse spray valve from Regency is an excellent choice when you need to replace a worn out or broken one, delivering performance you can count on. This valve is ideal for pre-rinse faucets where dishes and glassware are pre-scraped before going into a dishwasher or compartment sink. Its ultra-low 0.65 GPM flow rate delivers the power needed to blast away even heavy debris, while offering additional savings on your water bill compared to higher-GPM spray valves. The easy-to-use squeeze handle design provides a firm grip, while a convenient hold-down ring provides a way to keep the water flowing without having to constantly hold the handle in. This reduces hand fatigue and improves comfort over the course of a busy shift. A $\frac{3}{4}''$ -14MNPT connection allows easy connection to the hose handle. It is perfect for replacing or upgrading the spray valve on your Regency pre-rinse faucet.
