Notes & Details

Efficiently wash and sanitize your hands with this Regency $9" \times 9"$ wall-mounted hand sink! This hand sink is made of 20-gauge type 304 stainless steel along its top, bowl, and backsplash, guaranteeing reliability and durability. This material is corrosion-resistant when properly maintained. This sink is easy to clean and provides an affordably-priced hand washing station for any commercial kitchen. It features a single deep drawn $9" \times 9" \times 5"$ sink bowl with a compact design that allows the sink to fit in tight spaces and securely attach to the wall or a surface to open up floor space for other uses. To help limit possible contamination, (2) 18-gauge type 304 stainless steel side splashes are included with the sink. This added protection allows you to place the sink closer to work counters and other high-traffic areas without worry.

With an included wall-mount clip and 3 screws (sold separately), this hand sink is easy to assemble and mount. For proper drainage, a removable 1 1/2" IPS drain basket is included to eliminate the possibility of drain clogging. With a convenient 9 9/16" high backsplash, any water splashes will be confined inside the sink and then directly drip down the drain. This added feature helps maintain the integrity of your wall and floor to keep your establishment in its best condition. This hand sink includes a strainer and has two holes punched on 4" centers for the included faucet.

The faucet included with this sink features 1/2" NPT male connections for fast and easy installation. Its polished, chromeplated brass construction offers a sleek appearance while being sturdy enough to stand up to the rigors of daily use in a commercial environment. Functional in design, the 9 9/16" gooseneck provides adequate clearance and reach, and the 1.2 GPM aerator delivers a gentle water flow that's ideal for multiple applications. Thanks to the included tailpieces, this faucet's centers are convertible to 1/4" NPT for convenience.

Additionally, this faucet is engineered for maximum durability and uses Cerama cartridges to adjust the temperature and flow rate. These cartridges contain ceramic discs that form a long-lasting water tight seal. When the lever handles of this faucet are turned, the discs spin to allow water to pass through. T&S cartridges are designed with efficiency and convenience in mind, allowing you to swap out one piece in the event of a leak, instead of replacing multiple moving parts. Its lever handles with color-coded indexes help users easily distinguish between hot and cold.
