Notes & Details

Add these ServIt 423SWCLEGS "C" style designer legs to your ServIt strip warmer to keep your food warm in your busy kitchen! These legs attach directly to your ServIt strip warmer in order to prop the warmer on a countertop or prep table for back-of-house operations, or on buffet-style tables at your concession stand or catered event. The "C" shape of the legs allows clearance all around the warmer, and the incredibly slim design takes up minimal counterspace while maintaining an elegant serving experience. The legs are constructed at a 13" fixed height for a consistent distance from food to warmer every time. The attached rubber feet help to reduce movement and improve stability in the warmer, virtually eliminating accidental slips or tip-overs. The legs are easy to install on ServIt strip warmers using the pre-existing holes and included hardware set, which requires no retro-fitting.
