## TECHNICAL DATA

Connection Type	Hardwired
Control Type	Attached Toggle
Features	Overhead Quick Ship
Heating Source	Metal Sheathed / Calrod
Infrared	Without Infrared
Material	Stainless Steel
Plug Type	Hardwire
Power Type	Electric
Style	Double
Type	Strip Warmers
Usage	Medium Duty

## Notes & Details

---

Keep your prepared foods hot and ready to serve with the ServIt SWTD-24 24" double strip warmer with toggle controls! This strip warmer uses durable metal sheathed calrod elements to provide 1000 total watts of heating power, hot enough to maintain peak serving temperatures but gentle enough to prevent drying or overcooking. The large double orientation with 3" spacer enlarges the coverage area of your strip warmer, perfect for high volume establishments or larger dishes. The 3" spacer minimizes the overlapping heating areas to avoid drying out your food. It's perfect for use in your cafeteria, restaurant, banquet hall, buffet line, or anywhere that you need to keep prepared foods piping hot and fresh for your customers. The aluminum reflectors are designed specifically with the operator in mind, directing heat to a precise area to keep food hot and surfaces outside the zone cool.

The warmer's heavy-duty stainless steel housing provides excellent durability and corrosion resistance, making it ideal for a busy kitchen environment. The sleek stainless steel construction is easy to clean at the end of a busy shift, keeping your back-of-house to front-of-house operation in perfect order. Side-mounted toggle controls are simple to operate and provide one level of heat, so you can be sure your staff does not overheat your foods. The brackets must be used for proper spacing below an overself or other mounting method. Chains can be purchased separately to create the perfect distance between your strip warmer and serving surface. This switch guard helps protect the unit from accidentally turning off, which could keep the food below proper serving temperature. For your convenience, mounting brackets are included to make installation as easy as possible. This unit must be hardwired and requires a 120V electrical connection for operation.
