SALVAJOR TroughVeyor

Job: Item No.:

Model TVL

A Water Trough Conveyor and Disposing System

- Model TVL, left hand operation
- Model TVR, right hand operation

Recirculated Water used by the system for scrapping reduces water and sewer costs. The TroughVeyor consumes only 7 gallons of fresh water per minute.

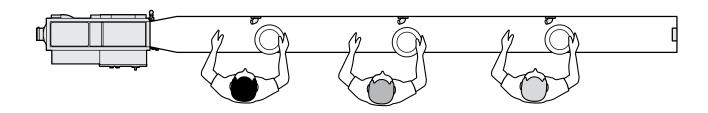

Trough Water Volume with the TroughVeyor is 70 gallons per minute. This volume swiftly propels food waste down the trough and into the disposer with no additional hand movement, leaving both hands free for high-volume scrapping. The TroughVeyor lets you keep up with large conveyor or flight dishmachines.

Design Flexibility is offered by the TroughVeyor as troughs can turn corners. The TroughVeyor's high water volume allows the design of wider, longer troughs allowing you to soak problem dishes or add gusher heads to pre-rinse compartmental trays.

HydroLogic Water Saving Control has an adjustable timer with user friendly LCD readout.

Typical trough layout

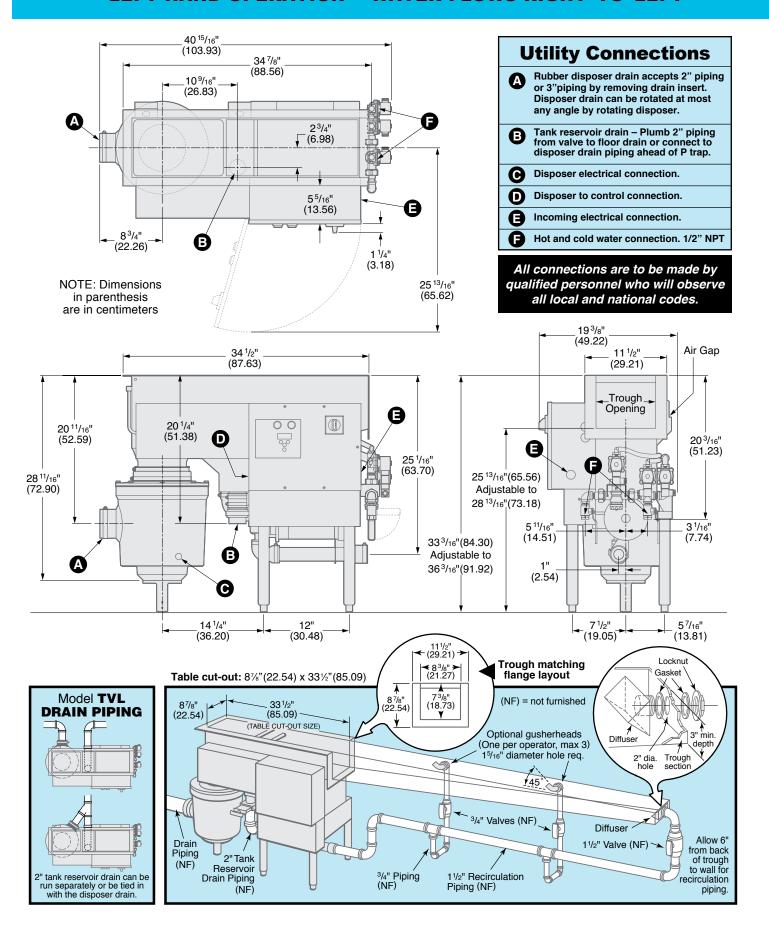

Typical trough layout is 12" wide and 14' in length with up to 3 optional gusherheads spaced 3' - 4' apart to accommodate 3 operators.
