Notes & Details

This Waterloo wall-mounted hands-free sensor faucet is the perfect solution when you need a dependable water fixture for your facility's restrooms and hand-washing areas! It features a 7 3/4" spout and a chrome-plated finish to provide a contemporary and refined look wherever it's installed. This faucet includes an below-deck mixing valve.

This unit has an infrared proximity sensor with a 30 second timeout feature and an adjustable sensor range of 1"-6". Because a sensor activates water flow, it has several advantages over a traditional handle-style faucet. It is hands-free, which reduces the opportunity for germs to spread, and it also prevents the faucet from running when it's not needed, which helps to cut down on your water bill. Additionally, the sensor comes with a 30-second timeout feature to prevent sink overflow and ensure water is being used only as needed. This faucet is powered by (4) AA batteries (sold separately), or you can use the optional UL certified AC wall adapter with a level VI efficiency rating. The control box and sensor cable install beneath the countertop for a clean presentation, with easy access when you need to service the faucet.

Waterloo sensor faucets provide the industry-leading quality you expect. With a heavy brass faucet body and certifications from a wide range of national and local regulatory agencies, you can install this model with confidence. And to give you total peace of mind, it comes with a 3-year replacement warranty.
